

PRESS RELEASE

Landmark Summits Reveal the Rise of Longevity Technocracies and MegaHubs at the Frontier of Longevity Policy and Governance

Aging Analytics Agency Executives Detail the Future of Longevity Governance and How Progressive Government-Led Longevity Development Initiatives Will Reshape the Political and Socioeconomic Landscape of Developed Nations

November 13, 2019, London, UK: Aging Analytics Agency Co-Founder Dmitry Kaminskiy and Strategic Director Eric Kihlstrom spoke at a landmark one-day event at King's College London strategically supported by Aging Analytics Agency, which focused on the synergies to be had between AI for Longevity on the one hand, and international cooperation on the topic of Longevity Policy and Governance.

The [AI for Longevity Summit](#) and the [International Longevity Policy and Governance Summit](#) were organized by the [Longevity AI Consortium](#) at King's College London and [Longevity International UK](#), with the strategic support of [Deep Knowledge Group](#), [Aging Research at King's](#) (ARK), the [Biogerontology Research Foundation](#), and [Aging Analytics Agency](#).

“Aging Analytics Agency is delighted to offer its strategic support to the Longevity AI Consortium at King's College London, which is taking bold steps in translating AI for Longevity biomarker discovery, for Longevity AgeTech, WealthTech and financial wellness across extended periods of Healthy Longevity, and in the practical implementation of Precision Health technologies. It is the application of AI for Longevity that will bring the greatest real-world benefits to the industrialization of Longevity to scale, and that will serve as the main driver of progress in the widespread extension of Healthy Longevity for all segments of society in the coming years” said Dmitry Kaminskiy, Co-Founder of Aging Analytics Agency.

Two new special analytical case-studies were also launched and presented at the summits by Aging Analytics Agency Co-Founder Dmitry Kaminskiy, who during the International Longevity Policy and Governance Summit delivered a presentation on [“Global Longevity Governance: 50 Countries Big Data Comparative Analysis of Longevity Progressiveness”](#), a new analytical report from Aging Analytics Agency that features fact-driven benchmarking of 50 nations using 200 parameters per country and 10,000 data points in total to rank their respective levels of Healthy Longevity and their current gaps between health-adjusted life expectancy and unadjusted life

expectancy, and to provide tangible policy recommendations on how to optimize their National Healthy Longevity.

Kaminskiy also delivered a presentation at the AI for Longevity Summit that featured highlights from Aging Analytics Agency's new "[Biomarkers of Longevity: Most Comprehensive and Minimum Required Panels of Biomarkers of Aging](#)", which utilizes comprehensive analytical frameworks to benchmark biomarkers of aging, health and Longevity according to ratios of accuracy vs actionability in order to present a "Minimum Viable Panel" of Longevity biomarkers that, while not the most precise as possible, are precise enough and immediately implementable in practice, and which further highlights the increasingly necessary role that AI will play in coordinating the practical implementation of Longevity biomarkers due to the sheer volume of life and health data involved. Meanwhile, Aging Analytics Agency Strategic Director Eric Kihlstrom delivered a presentation on the Global Longevity Landscape, with highlights from the UK, EU, and USA.

"With our support of these two landmark Longevity-focused summits, Aging Analytics Agency reaffirms and deepens its ongoing commitment to continue promoting greater cross-sector, cross-country, international cooperation and synergy on the front of Longevity Policy and Governance, which we consider to be the next great frontier of the global Longevity Industry, and the domain that will bring the greatest practical benefits to humanity in the years to come" said Eric Kihlstrom, Strategic Director of Aging Analytics Agency.

About Aging Analytics Agency

Aging Analytics Agency is the world's premier provider of industry analytics on the topics of Longevity, Precision Preventive Medicine and Economics of aging, and the convergence of technologies such as AI and Digital Health and their impact on healthcare. The company provides strategic consulting services in fields related to Longevity, and currently serves as the primary source of analytics for the specialized hybrid hedge fund Longevity.Capital, as well as the UK All-Party Parliamentary Group for Longevity.
