

The Advanced UAP Ecosystem Framework

The Advanced UAP Ecosystem framework is designed to provide a comprehensive structure for the study and investigation of unidentified flying objects. It encompasses various participants across Earth-based and outer space domains. Researchers and investigative organizations analyze reported UFO sightings and encounters, drawing from disciplines such as planetary science, astrobiology, and forensic analysis. By leveraging existing knowledge, exploring technosignatures, and employing extraterrestrial chemistry, the framework aims to build a systematic understanding of UAP phenomena, their potential origins, and implications.

Earth-based Ecosystem Participants

UAP Researchers

UAP Enthusiastic Communities

Investigative Organizations

Scientific Institutions

Government Agencies

Aviation Experts

Forensic Analysts

Unidentified Flying Objects Study

UFO Sightings and Reports

Anomalous Aerial Phenomena

UFO Investigations

Historical UFO Cases

UFO Reporting Hotlines

UAP-Tracking Facilities

Space Agencies

Deep Space Telescopes

Satellite Networks

Space Surveillance Networks

SETI (Search for Extraterrestrial Intelligence) Projects
