

AI Industry Analytics, a specialized market intelligence agency focused on analyzing the AI sector, has released a pioneering assessment of the **AI in BioMed Industry in the United Kingdom**. Fueled by recent explosive developments in AI, this report predicts that the BioMed AI economy in the UK will surpass 3 Trillion USD in 2027, a significant increase from its 2023 value of USD 291 Billion. With the AI market experiencing unparalleled growth, diversification, and disruption, accurately monitoring its size, trajectory, and global presence has become increasingly intricate – a challenge that **AI Industry Analytics is uniquely equipped to tackle**.

The **United Kingdom** currently maintains a notable presence in the global landscape of BioMed companies, accounting for approximately **11.6%** of such entities worldwide. Within the UK, **London** emerges as a significant hub, hosting more than half of the nation's BioMed companies, specifically constituting **52.8%** of the total.

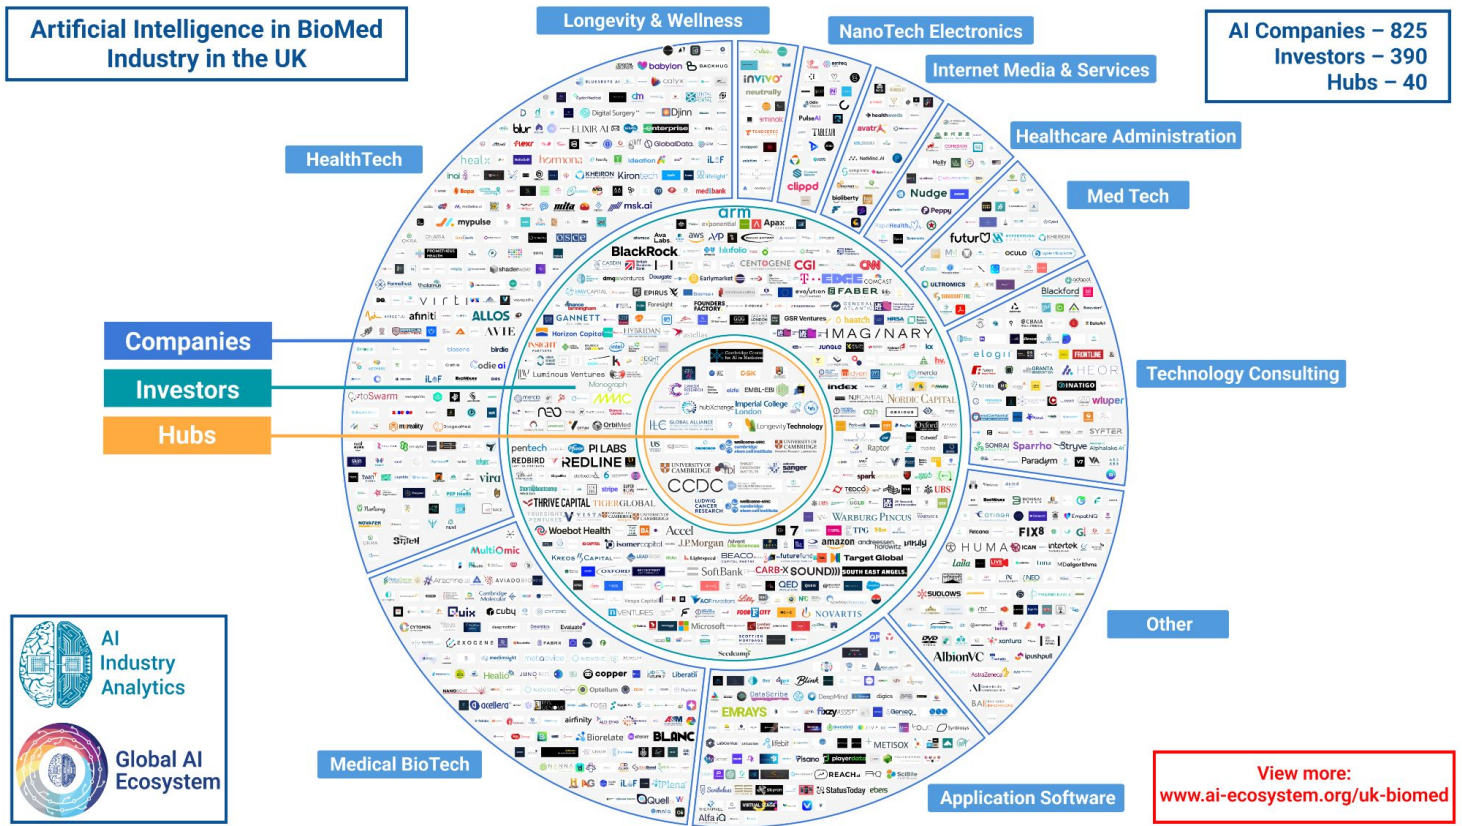

Cambridge, while significant in its own right, holds the second position in terms of the number of AI companies operating in the BioMed sector within the UK. It claims a share of **4.2%**, which is notably smaller, being more than 12 times less than the share of companies present in London.

Investors in BioMed AI Companies in the UK

In the United Kingdom's AI in BioMed sector, a majority of investors, comprising **55.1%**, are **domestic**. Meanwhile, **25.9%** of investors originate from the **United States**. This stands in contrast to the global AI in BioMed industry, where the U.S. investors occupy the top position, constituting approximately half of all investors, while those from the UK account for only around 6%. The United States is followed by **Germany**, representing **2.1%** of investors, securing its position as the third-leading country in this regard. **France, India, Australia, and Canada** each contribute approximately **1.3%**, with all other countries having **less than 1%** of investors.
