

Complex Frameworks Constructor: SaaS Solution to Interactively Visualize Any Complex Network

Contacts:

Type: Email

Status: In progress

Dear {Name},

[Deep Knowledge Group](#) (DKG) is launching its extremely sophisticated **Complex Frameworks Constructor** as a SaaS and white label solution. The system constitutes the most advanced, visually compelling and user-friendly **(no-code plug and play) technology for dynamically visualising any complex framework** (networks of interactions between entities, industry participants, technologies, etc) **on a single interactive display**.

Built on top of highly advanced data visualisation assets developed for DKG's internal use, this unique IP was designed to significantly surpass current state-of-the-art for dynamically visualizing highly complex networks, data structures and relationships in a visually compelling, interactive, navigable and multidimensional yet understandable manner. It is now being made available as a **white label solution and SaaS (direct payment or equity-for-code swap) for clients to create and release complex framework visualisations under their own brand**.

System highlights include:

- **Complex Networks Visualization:** the main visualization area displays a network of nodes and paths representing framework entities (e.g., companies, technologies, etc) and their relationships.
- **Timeline Slider to Show Evolution Over Time:** A timeline slider allows users to traverse through different years to observe the evolution of the framework.
- **Pop-up Node and Path Profiles:** Each node and path can be interactively selected to reveal additional details and data.
- **Variable Scale for Full Interactivity:** Users can zoom in on specific nodes or paths to view finer details, supporting both mouse scroll and pinch-to-zoom on touch-enabled devices, to enable both bird-eye full framework views and deeper dives into specific framework relationships.

Here's a preview of the key aspects: www.deep-innovation.tech/complex-frameworks

We are currently accepting expressions of interest from organizations that wish to order a white label solution or SaaS (direct payment or equity-for-code swap), and we would be delighted to include you in the first batch of discussions.

If this offer is of interest please reply to this email or complete [this form](#).

Kind regards,

Aksholpan Alpysbay

Dear {Name},

[Deep Knowledge Group](#) (DKG) is launching its extremely sophisticated **Complex Frameworks Constructor** as a SaaS and white label solution for the first time to select partners. The system constitutes the most advanced, visually compelling and user-friendly **(no-code plug and play) technology for dynamically visualising any complex framework** (networks of interactions between entities, industry participants, technologies, etc) **on a single interactive display**.

Developed on top of highly advanced data visualisation assets internally developed and refined over 5 years for DKG's internal use, this unique IP was designed to significantly surpass current state-of-the-art for dynamically visualizing highly complex networks, data structures and relationships in a visually compelling, interactive, navigable and multidimensional yet understandable manner. It is now being made available as a **white label solution and SaaS (direct payment or equity-for-code swap)** for clients to create and release complex framework visualisations under their own brand.

System Highlights

The main visualization area displays a network of nodes and paths representing framework entities (e.g., companies, technologies, etc) and their relationships.	Timeline Slider to Show Evolution Over Time: A timeline slider allows users to traverse through different years to observe the evolution of the framework.	Pop-up Node and Path Profiles: Each node and path can be interactively selected and clicked on to reveal additional details and associated data.	Users can zoom in on specific nodes or paths to view finer details, to enable both bird-eye full framework views and deeper dives into specific framework sub-networks and relationships.
