Distribution of Industries on the Market of 450 AI Companies

Industry market share shows the percentage of a certain industry among all industries in which AI-related companies operate. Thus, the more companies operate in a particular industry, the greater the share of this industry in the overall market is. According to the graph, the **Software Development industry takes the biggest share of 33.8%** of AI companies operational market.

Since companies may implement AI technology in an almost infinite number of cases, they participate not in a single industry solely but several at a time. Nearly all companies (**81%**) are engaged in **Software Development**, some for internal usage, and some sell their software as a service. About **one-third** of companies work in such industries as **Social Media & Communication, Marketing & Advertising, and Big Data**.

Industry Market Share

Main Operational Markets

Other Countries
1.4%

Ukraine
70.4%

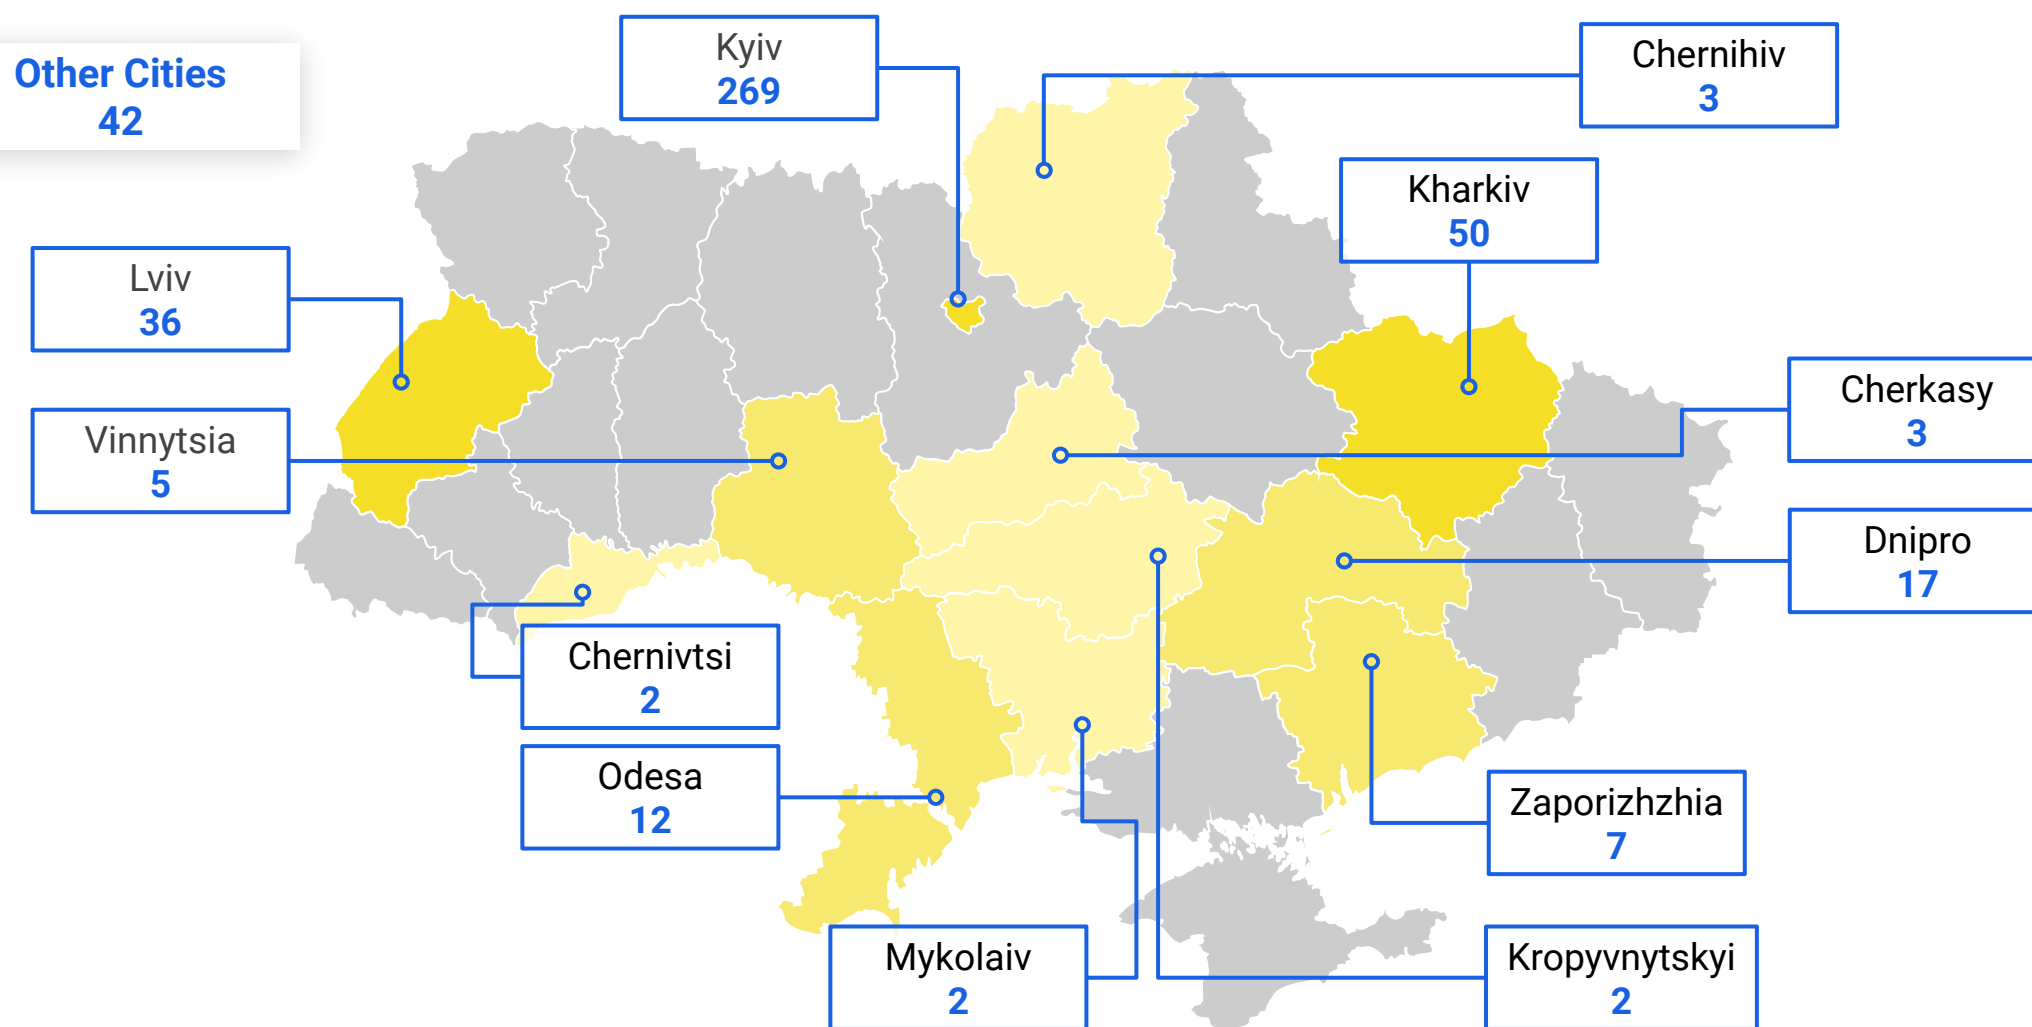

UK
3.2%

Europe
8.8%

US
16.2%

The operational markets of 70% of Ukrainian AI companies are located in **Ukraine**. Also, the **United States** stands out with 16%. Slightly more than 3% of the companies are oriented to the **UK** market.

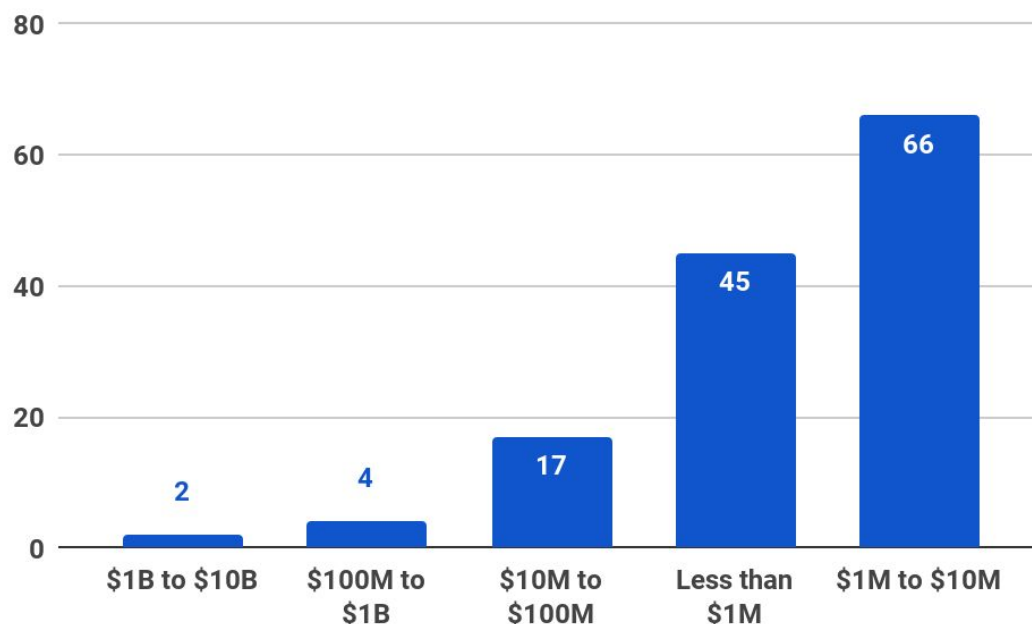

Distribution of DeepTech Companies in Ukraine

Most Ukrainian companies are located or registered in **Kyiv**. Also, a large number of companies are registered in large Ukrainian cities, such as **Kharkiv**, **Dnipro**, **Lviv**, and **Odesa**. Also, it can be noted the growth in the number of companies in cities such as **Vinnytsia** and **Zaporizhzhia**.

Distribution by Revenue Range

Number of Companies in Each Revenue Range

Distribution of Companies by Revenue Range

45 of the surveyed companies are small, with annual revenues of **less than \$1M**. Most of the surveyed companies, namely **66**, can be classified as medium, with revenues ranging from **\$1M to \$10M**. Only **23** companies can be attributed to large organizations with revenues of **more than \$10M**.

Distribution by Number of Employees and Age Range

Distribution of Companies by Number of Employees

Almost half (44%) of all companies have between **11 and 50 employees**. Also, a large share is occupied by companies with **1 to 10 employees, namely 27%**. The rest of the companies are relatively big organizations having **more than 50 employees**.

Distribution of Companies by Age Range

45% of companies have been operating in the market for **more than 5 years, but less than 10 years**. At the same time, **90 companies have recently started their existence, which is 41%** of all investigated companies. **The rest** have been operating on the market for **more than 10 years**.

The Problem and the Solution

DEEP
KNOWLEDGE
ANALYTICS

Current State of Tech Market in Ukraine

\$6.8B

Exports of the Ukrainian IT industry in 2021; 36% growth compared to 2020

\$832M

Volume of VC and PE investments in 2021; 45% growth compared to 2020

285K

IT specialists; 80% of employees are between 18 and 32 years old

74%

of people in IT sector are technical specialists

IT market in Ukraine experiences a significant growth over the last 10 years, with the most active dynamics during the last 5 years. As of beginning of 2022 Ukraine demonstrates the growth rate of the IT services market at 20-25% annually.

IT sector accounts to more than 200,000 technicians to meet the growing global demand for software development and maintenance services.

What is important, Ukrainian tech sectors experience qualitative transformations: increasing number of companies start to develop own products distancing from outsourcing model prevailing in Ukraine for years.

This creates tremendous investment opportunities and pushes the development of Ukrainian tech ecosystem to move forward. With the gradual and collaborative development of tech ecosystem inside Ukraine, accompanied by allocations of capital and exchange of expertise, the tech market in Ukraine will continue to grow.

The Problems of Ukrainian Startups

- 1 **Weak infrastructure between startups and potential investors** also hinders the development of innovative ideas. And the existing business incubators and various venture funds do not have enough qualified staff to assess the prospects of a project, the risks and feasibility of investing.
- 2 **The migration of new business outside the country.** Young entrepreneurs consider the United States or European countries to be the best environment for their business development. And that's why they implement their business ideas abroad.
- 3 Another problem in the development of startups in Ukraine is the **lack of government incentive**. Today, Ukrainian legislation is not at all adapted to work with startups, the venture capital market and their respective development.
- 4 All of these problems, in fact, are common to the developing markets and countries. An investor equipped with the right means to conduct a profound market intelligence can make allocations with the opportunity of receiving better outcome due to the **comparatively affordable investment rounds**.

Key Problems for AI Market in Ukraine 1/2

Problem	Key challenges	Recommendations
The need for solid educational ground in AI & ML field	Only few Ukrainian universities have divisions focused on AP & ML. Those institutions that have decent educational programs most are private. Therefore, people who want to get into AI & ML field and have certain skills, get the basics of the discipline in other ways (private educational courses, foreign educational institutions). The shortage of AI experts is also partially provoked by the companies, attracting university professors into commercial sector.	It is very crucial for Ukrainian business to get involved in the process and begin to actively invest in cooperation with universities, startups and companies-experts in the field of artificial intelligence and machine learning.
Ukrainian AI market requires managers with fundraising experience	The culture of IT-product entrepreneurship in Ukraine is quite young. Ukrainian entrepreneurs in some cases may have less experience, product development organization and skills in fundraising. Some of such managers may lack knowledge on how to attract investors' money, because they do not understand what is important to them and what factors should be taken into account.	It's required to build a strong business ecosystem, entrepreneurship support programs and focus more on business processes than just technical implementation.
The need of network-based industry events	Quite large number of events, thematic conferences are held annually in Ukraine. However, some of them are aimed at PR of organizers and sponsors.	The events must be focused on the idea to create new partnerships, exchanging the international experience and "nurturing" AI ecosystem in Ukraine.

Key Problems for AI Market in Ukraine 2/2

Problem	Key challenges	Recommendations
The absence of defined specialization of Ukrainian AI market	The practical application of AI & ML lies in cross-industrial nature. Making a good AI-based solution requires knowledge of the subject area, programming and mathematics, as well as data and business space in which these solutions will be piloted and developed. Although Ukraine have a potential to become global AI player, from the tactical point of view, it's essential to focus on a few market segments in medium perspective.	Having identified priority areas, it is necessary to direct available resources there: to train mentors, create educational programs, finance startups. It will likely to give a chance to gain a foothold on the world map of artificial intelligence.
Absence of market-focused analytical and investment platforms	The common problem of VC investments is the absence of feasible ways to compare entities across the industry, and to validate of the companies pipelines and approaches. This naturally leads to the high level of uncertainty, which affects the expediency to risks ratio.	Creation of advanced analytical systems and matching tools able to identify the patterns across the whole AI industry.

The Problems Ukrainian Startups Face since the War Started 1/2

After Russia started a full-scale war against Ukraine on February 24th, [Ukrainian Startup Fund](#) conducted an online ecosystem survey. About 150 founders of Ukrainian startups took part in it. Respondents answered questions about the possibility of continuing their activities, in particular, the need for relocation, teamwork, funding, investment needs, further project development plans, etc. The results of the study allow us to analyze the current state of the Ukrainian startup ecosystem.

Team Location

Whether Startups Continue Their Work?

How Much Will The Savings Of Startups Be Enough?

The Problems Ukrainian Startups Face since the War Started 2/2

37.4% of surveyed companies need **relocation** of the team

85% of surveyed companies **have a clear understanding** of what to do next

41.1% of surveyed companies **don't have enough savings** to continue working

99% of surveyed companies **need additional funding**

Solutions

Collaborative Platform

Deep Knowledge Analytics aims to find incentives to further development of AI and DeepTech in Ukraine. To this end, the specialized collaborative platform will allow to contribute to building the network of tech entrepreneurs

Investors-to-companies smart matching

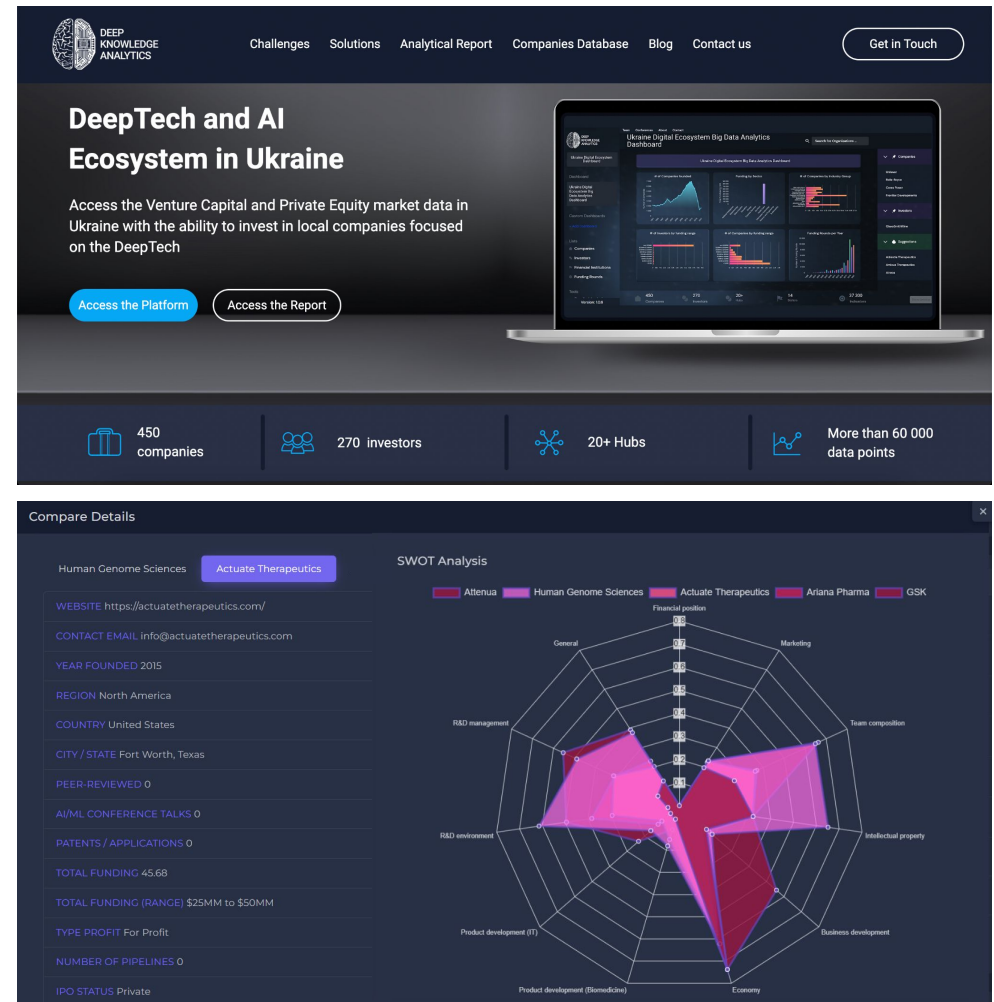

The analytical dashboard will ease the cooperation between companies and DeepTech investors. The algorithms embedded into the platform will provide the recommendations for both types of users on the mutually beneficial partnerships.

Company-to-company smart matching

The tool is aimed to trace the interdependencies between companies and provide opportunities to back each other based on their industry fields.

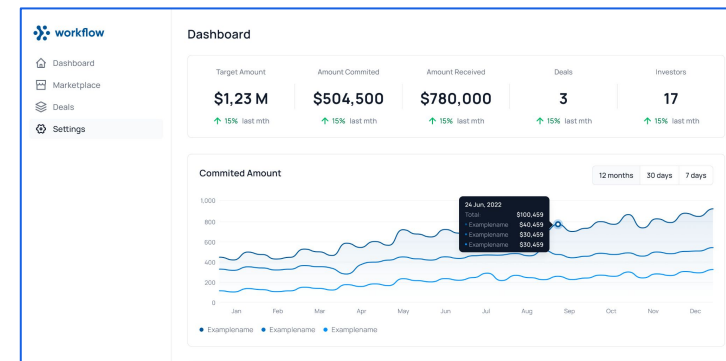

SWOT analysis

The tool will allow investors to receive quantifiable assessment of the companies and make a profound and specialized market intelligence.

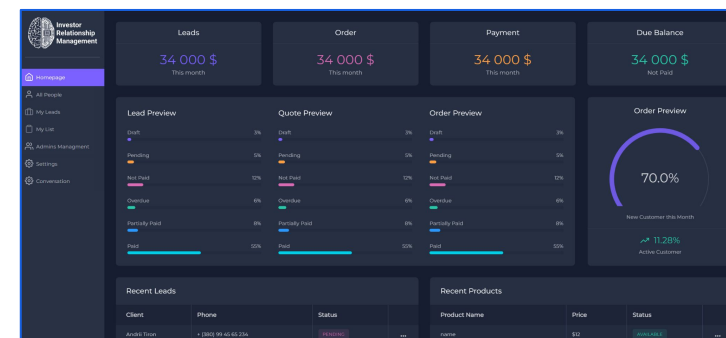

Special Purpose Vehicles (SPV) fundraising platform

Our solution will allow investors to deploy capital easily in a time-efficient way and startups to fundraise and keep on growing. DKG's SPVs Platform is tailored to set a convenient and clear investment trajectory with the help of investing in Special Purpose Vehicles (SPVs), companies created for a purpose of investing in a single startup.

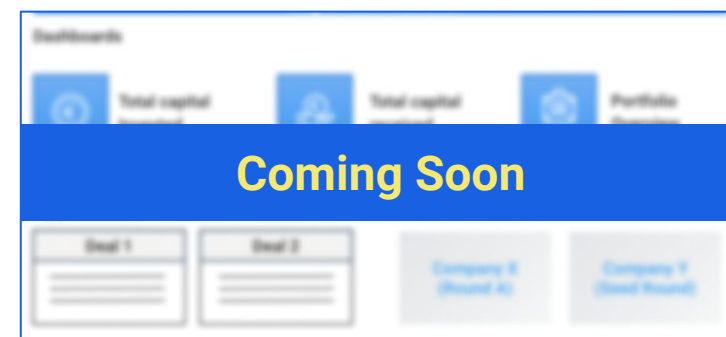

Investor relations management (IRM) tool

The tool will allow companies to automate and track their relations with investors. IRM will give the ability to build own interactive reports and graphs on outreach performance in form of the dashboard.

LegalTech platform

An IT-based compilation of legal investment processes to optimize investment relations and business transactions.

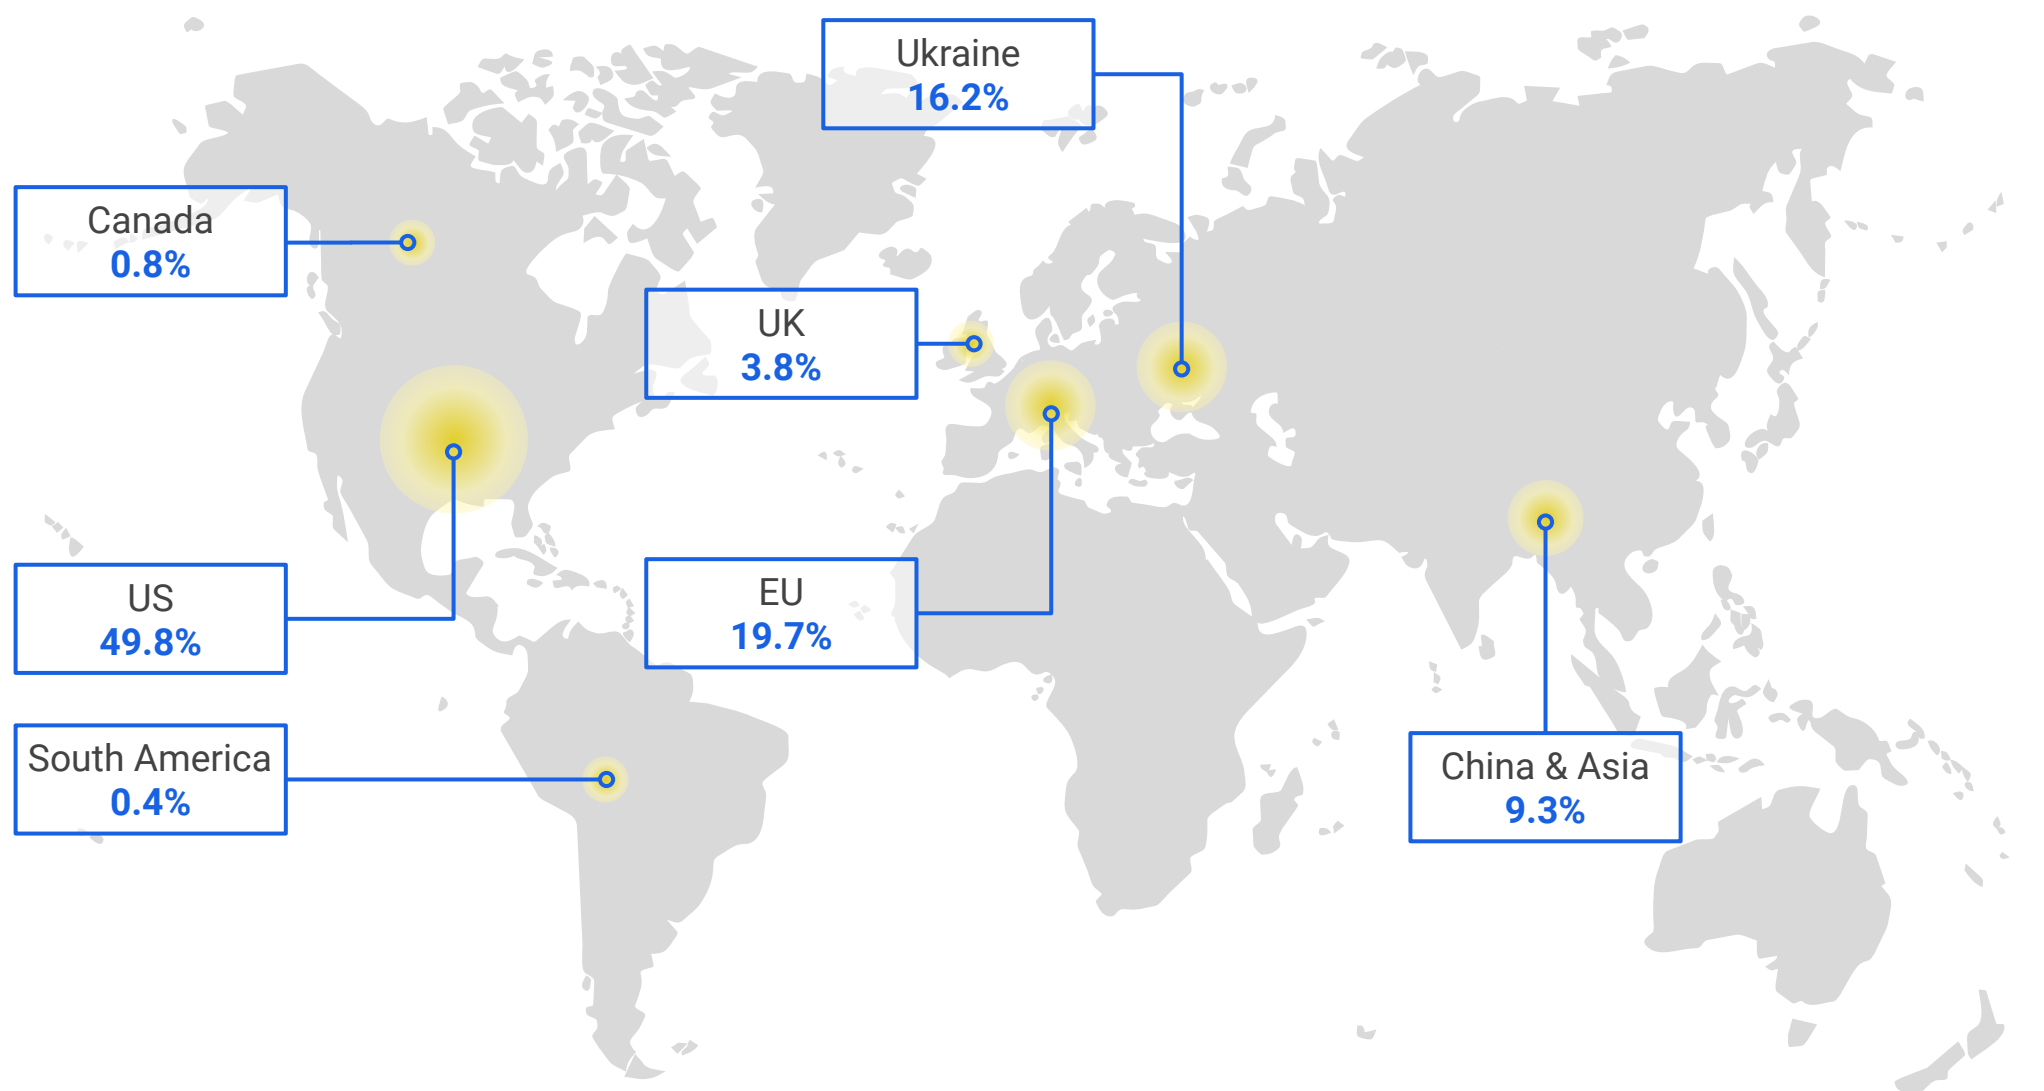

Investment Landscape Overview

DEEP
KNOWLEDGE
ANALYTICS

Distribution of 270 Investors

The **United States** takes the lead in the number of investors in AI/ML companies in Ukraine accounting for almost half of all investors. Such distribution occurs because the United States is among the top markets where Ukrainian AI companies operate. **Ukrainian** investors take only 3rd place.

Distribution of Investors by Types

Most of the funding into AI/ML companies in Ukraine comes from **Venture Capital (30.5% of total funding)**. Individual investors represent 21.6% of all fundings. Accelerators closes top 3 contributors with 13.9% of total funding in AI/ML companies in Ukraine.

Distribution by Funding Status

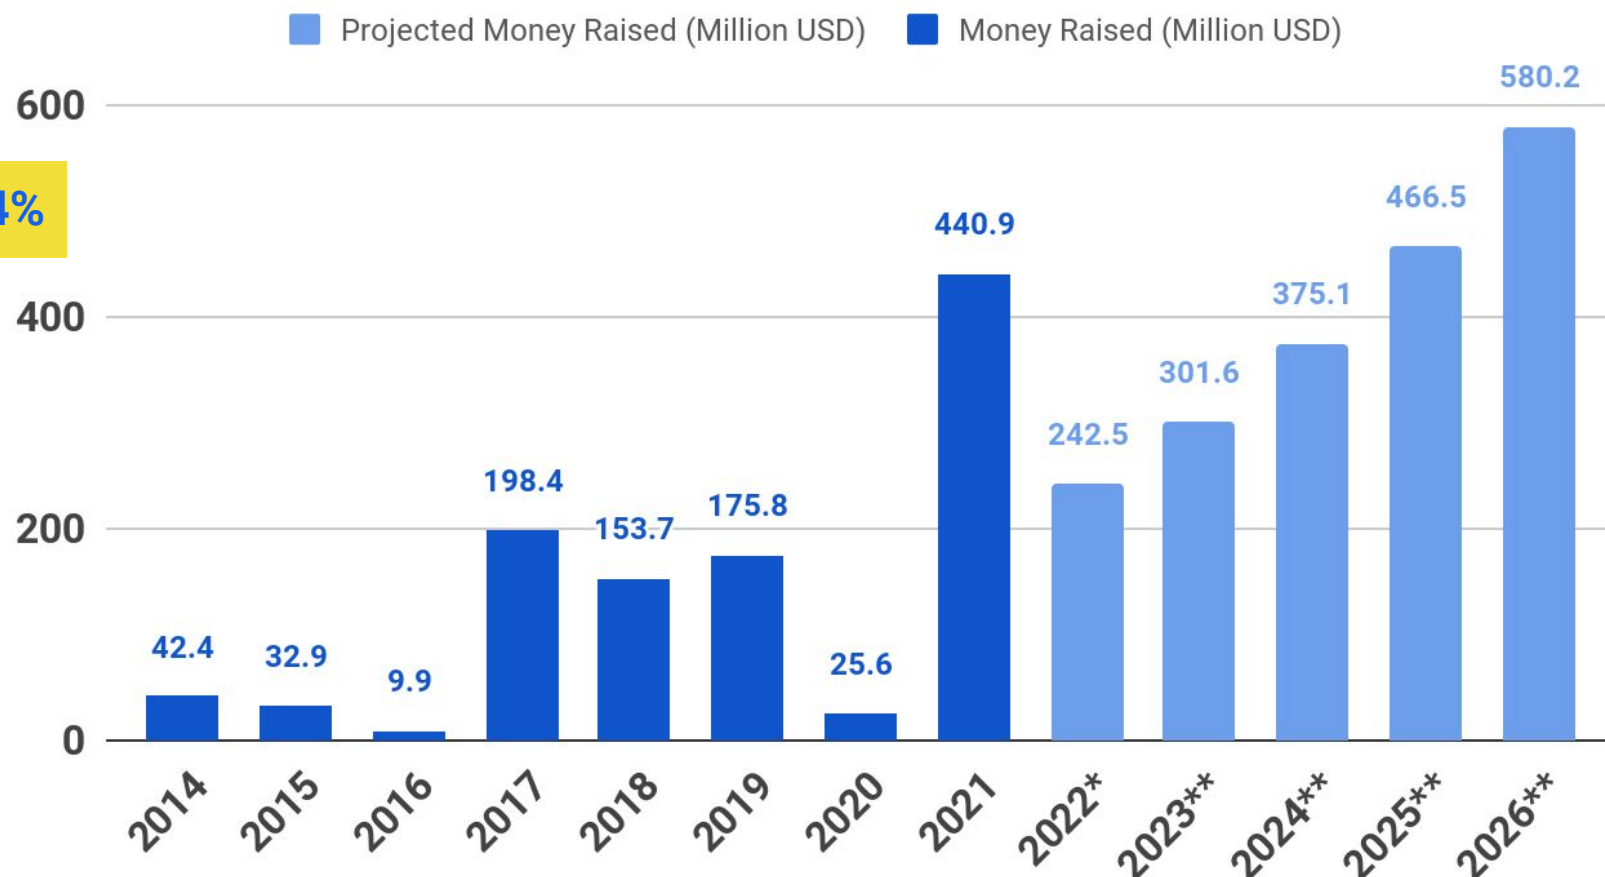

12% of companies now have **pre-seed** funding status. Almost two-thirds of companies (**61%**) now have **seed** funding status. Only **16%** of companies have reached the **Early Stage Venture** stage. **5%** of companies are in the **M&A** stage. These indicators clearly show that Ukrainian companies are attractive for investment because they are innovative and in the early stages of funding.

Industry Funding by Years

CAGR 2014-2022 = 24%

* Forecast taking into account the prediction of the World Bank about the possible fall of the Ukrainian GDP by 45% in 2022 due to the war
** CAGR-based forecast

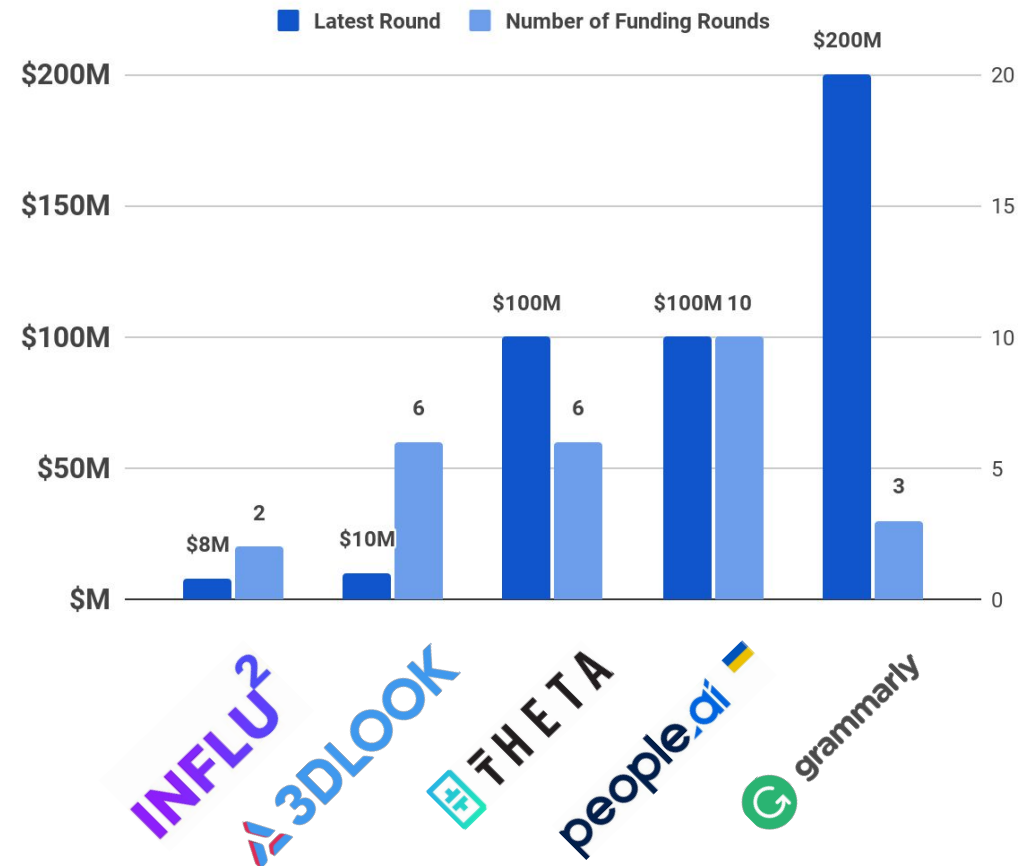

Investments in Ukrainian companies applying AI increased significantly over the last 10 years from **\$42.4 million in 2014 to \$440.9 million in 2021**, which shows the incredible growth of the Ukrainian economy and the attractiveness of Ukrainian companies to domestic and foreign investors. It is worth noting the sharp decline in investment in 2020 in connection with COVID-19, and in 2022 (**\$1.1 million in Q1 2022**) due to the invasion and war of Russia against Ukraine.

Largest Funding Rounds in 2021

The largest funding rounds of prominent companies in 2021:

- **Grammarly**, a cloud-based typing assistant that reviews spelling, grammar, punctuation, clarity, engagement, and delivery mistakes, raised a total of \$200 million in funding over the Private Equity in November 2021.
- **People.ai**, a service that automates manual data entry, increases sales productivity and provides actionable intelligence across all management tools, raised \$100 million in Series D in 2021 to expand its services across the countries.
- **Theta Labs**, a blockchain video delivery network, raised \$100 million in Venture funding in March 2021. The capital raised will enable more focus and investment in the growing company's projects.
- **3DLOOK**, the global leader in AI-first mobile body scanning solutions enabling brands to virtually replace the entire in-store fitting room experience, raised a \$10 million in Serie A led by Almaz Capital, Flyer One Ventures, TMT Investments, and Zubr Capital.
- **Influ2** is a person-based advertising platform for B2B companies. The company raised \$8 million in Serie A in 2021, which rose the valuation up to \$11.4 million. The main investor of the company is Rally Ventures.

Top 5 Investment Deals

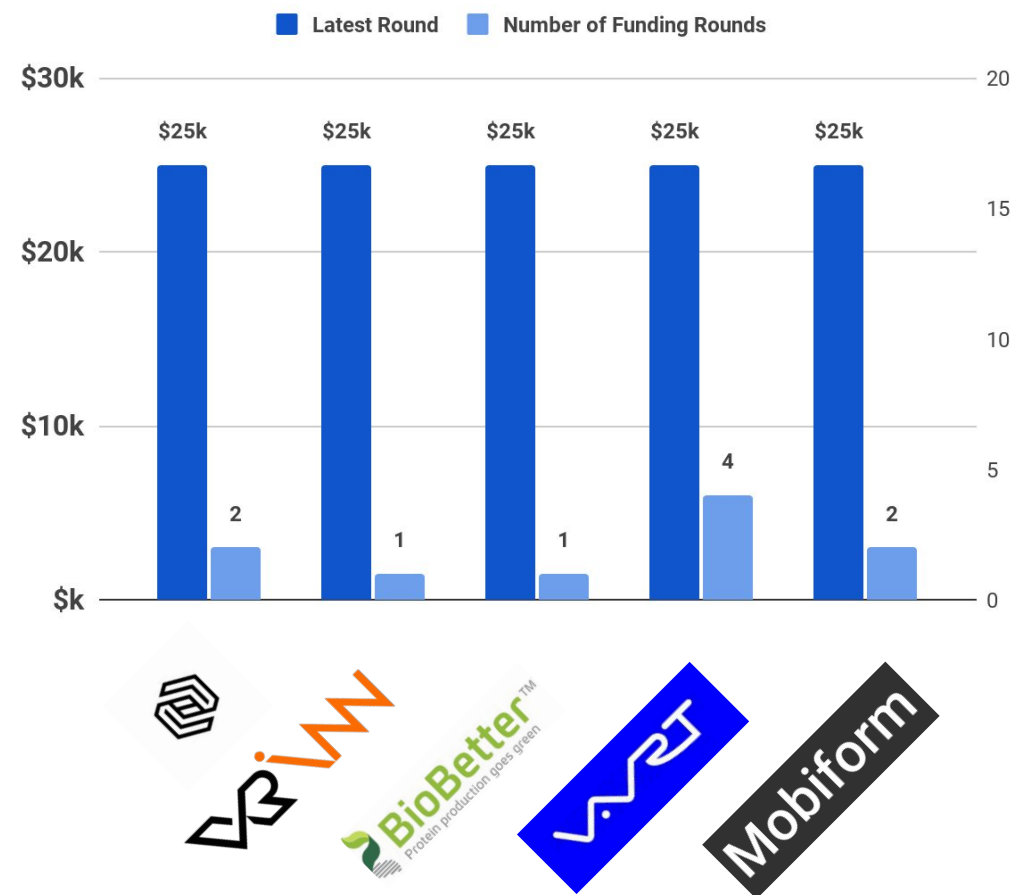

Small Funding Rounds in 2021

The small funding rounds of prominent companies in 2021:

- **Mobiform**, a dynamic, design-led manufacturer of vanity units, wardrobes, and dressing rooms, raised \$25 thousand in pre-seed funding round, led by Ukrainian Startup Fund. The total amount of funding for the company reaches \$225 thousand in 2021.
- **V-Art**, a platform providing a comprehensive ecosystem for art market professionals through an NFT+ marketplace, and virtual exhibition technology, banked \$25 thousand in pre-seed funding round, led by Ukrainian Startup Fund.
- **BioBetter** has developed a groundbreaking, cost-effective, protein expression plant-based platform to produce complex growth factors for use in cultivated meat. The pre-seed round for \$25 thousand was led by Ukrainian Startup Fund.
- **VR Inn** is a full-body, free-roam VR content marketplace for location-based entertainment. In March 2021, the pre-seed round of funding enabled the company to raise the amount of \$25 thousand to enlarge and implement new innovative projects.
- **Agro BI by Horos.AI**, which gives plant-level insights on germination, weed & disease trends based on drone imagery, raised \$25 thousand as a grant from Ukrainian Startup Fund in May 2021.

Initiatives of Ministry of Digital Transformation of Ukraine in AI & ML

DEEP
KNOWLEDGE
ANALYTICS

Ministry of Digital Transformation

Ministry
of Digital Transformation
of Ukraine

www.thedigital.gov.ua

The Ministry of Digital Transformation (*Ukrainian: Міністерство цифрової трансформації України*) is a government ministry in Ukraine that was established on 29 August 2019 when Mykhailo Fedorov was appointed as Minister of Digital Transformation in the Honcharuk Government. It manages the implementation of state policy in the field of informatization, e-government, information society development.

The Ministry of Digital Transformation is working to create a "state in a smartphone" called "Diia" that combines a mobile application and a public services portal.

The first step of the Ministry was the creation of diia.gov.ua, the online portal of public services, and the mobile application, where everything is fast, clear and easy to understand. They allow the citizens of Ukraine to get a service when and where they need it without worrying that it'll take all day in the queue and cost a lot of nerves.

The Ministry is actively working on transforming Ukraine into a country of IT companies and startups. One of the major steps was the establishment of Diia City, a special legal and tax regime that creates favorable conditions for the development of IT business, as well as introduces a set of incentives for Ukraine to become a high-tech digital state.

The initiative aimed to increase the share of IT in Ukraine's GDP from 4% to 10%, and enlarge the industry's revenues up to \$ 16.5 billion.* Ultimately, this will allow Ukraine to become the largest IT hub in Europe.

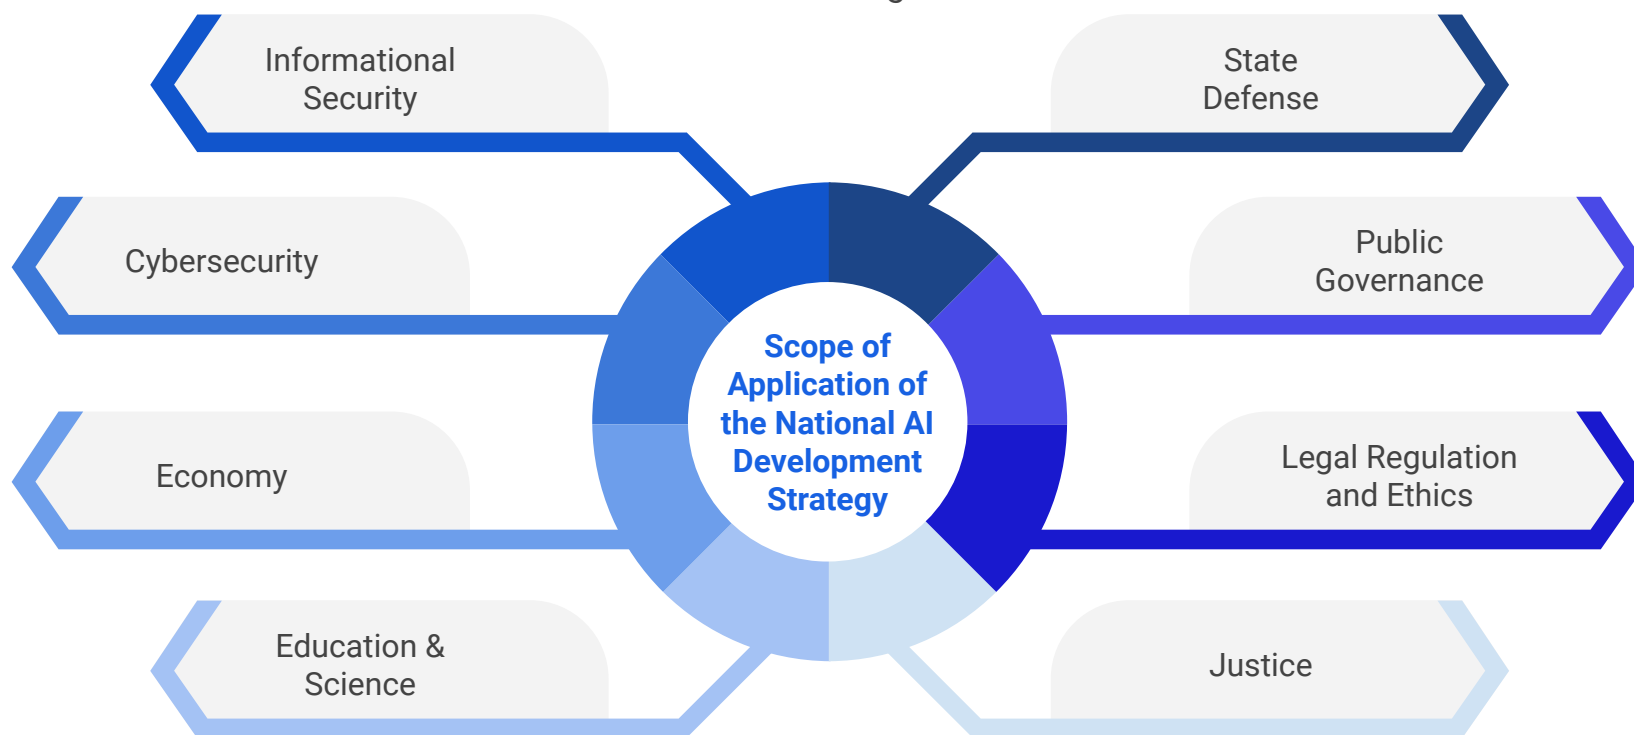

Ministry of Digital Transformation: National AI Development Strategy

In recent years, Ukraine's world-class artificial intelligence (AI) industry has become something of a calling card for the country's booming tech sector. This success has proved possible without the benefit of any significant state support. Indeed, many believe the vibrancy and dynamism of Ukraine's AI industry are at least partially due to the relative absence of government interference in the sector.

The free market spirit that characterizes the Ukrainian tech sector led to considerable skepticism when plans were first unveiled in late 2020 for an official [National AI Development Strategy](#) to cover the coming decade. Approved by the Ukrainian Cabinet of Ministers, this

Development Strategy seeks to harness the country's existing AI capacity and channel it towards a number of strategic national priorities.

Ukraine's new Development Strategy aims to embed AI technologies in every aspect of the country's development. It seeks to reform the education system in order to provide the next generation of Ukrainian tech companies with the AI talent and qualified human capital necessary to drive the country forward. It also aims to accelerate the introduction of AI technologies throughout the Ukrainian economy to safeguard the global competitiveness of sectors ranging from heavy industry to agriculture.

The Expert Committee on the Development of AI

Expert Committee on the Development of Artificial Intelligence

under the Ministry of Digital
Transformation of Ukraine

The Expert Committee on the Development of the Artificial Intelligence under the Ministry of Digital Transformation of Ukraine was established on December 21, 2019 (Order №28).

The main task of the committee is to increase Ukraine's competitiveness in the field of Artificial Intelligence.

www.ai.org.ua

Scope of activities of the Expert Committee:

- Initiation and participation in the development of basic documents on AI development.
- Human Capital development projects, AI labs, catalog of educational programs, launch of training programs.
- Introduction of AI in the justice and the penitentiary systems of Ukraine.
- Contributing to the participation of the representatives of AI tech industry of Ukraine in the international conferences and business initiatives.

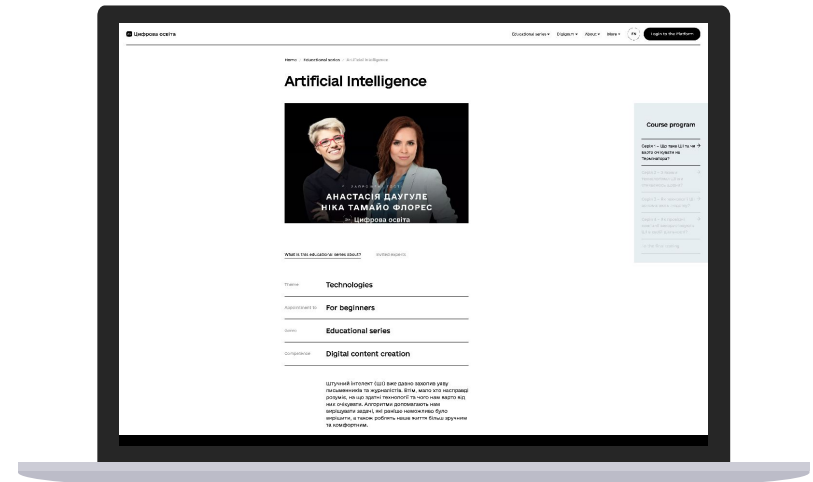

The Committee publishes the [periodic overview of AI ecosystem in Ukraine](#). The team of the Committee consists of practitioners having up-to-date experience in AI and international track record and global visibility in AI tech industry.

Ministry of Digital Transformation: Educational Initiatives in AI

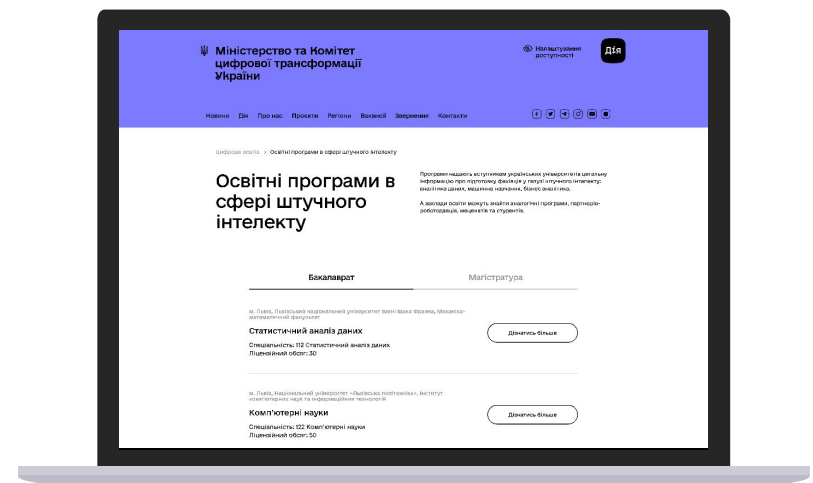

In order to explain to Ukrainians why the country needs to develop artificial intelligence, the Ministry of Digital Transformation even released [an educational series](#). Based on Intel's AI For Citizens program, the course is a 4-hour, self-paced learning program that demystifies AI in an inclusive manner.

The series allow students to get the idea what is AI, what benefits and risks it can bring, and how such technologies are offered by Ukrainian and international companies. The final testing allows to obtain a certificate certifying the successful completion of a course of 0.1 ECTS credit.

The ministry has developed a [web portal outlining the educational programs in the field of AI & ML in Ukraine](#). The programs provide entrants to Ukrainian universities with detailed information on the training of specialists in the field of artificial intelligence: data analytics, machine learning, business analytics.

Educational institutions can find similar programs, employers' partners, patrons and students.

AI Application in State Defence

Agreement of Collaboration the in AI field With “Ukroboronprom”

The Ministry of digital transformation of Ukraine and the state concern Ukroboronprom has signed a memorandum of intent to consolidate efforts to develop the digital economy, digital innovations, including the field of AI technologies.

AI is of great interest of Ukrainian defense bodies in terms of protecting the cyberspace and the creation of weapons and equipment of a new state-of-the-art models. They involve, in particular, unmanned systems, the true potential of which covers all environments of combat - land, sea, air and space.

AI Application During the Invasion of russian federation of Ukraine

In March 2022, Ukraine's defense ministry began using Clearview AI's facial recognition technology, after the US startup offered to uncover russian assailants, combat misinformation and identify the dead. Ukraine has received free access to Clearview AI's powerful search engine for faces, letting authorities potentially vet people of interest at checkpoints, among other uses. That database can help Ukraine identify the dead more easily than trying to match fingerprints and works even if there is facial damage.

Ministry's Key Partnerships in AI & ML Field

In January, 2021 the Ministry and venture fund [QPDigital](#) has signed the Memorandum of intention to cooperate in the fields of AI, blockchain and GameDev. The parties aim to teach financial and investment literacy of students of visionary technical universities in Ukraine and plan to launch an educational project.

The primary purpose of the memorandum is mutually beneficial cooperation between the parties, aimed at creating favorable conditions for the development of the internal IT market, which will be able to create their own products, competing with global companies.

In May, 2021 the Ministry has started the cooperation with the global philanthropic organization [Luminate](#). Luminate undertakes to coordinate the activities of the Expert Committee on the Development of the Artificial Intelligence. The parties aim to create laboratories of artificial intelligence in different regions of Ukraine and to introduce AI technologies in the justice system.

Luminate funds and supports non-profit and for-profit organisations and advocates for policies and actions that can drive change. We prioritise delivering impact in four connected areas that underpin strong societies: Civic Empowerment, Data & Digital Rights, Financial Transparency, and Independent Media.

The Ministry has partnered with [Data Science UA](#), the company focused on outsourcing projects with all stages of data science and AI R&D center opening, from legal and compliance to recruiting and HR. The company's employees are active participants in AI-related conferences in Ukraine. Data Science UA's representatives of top management has played an active role in launching the Expert Committee in AI and the creation of AI educational courses.

Diia.City Legal and Tax Regime

DEEP
KNOWLEDGE
ANALYTICS

Diia City – New Tax Regime for Tech Companies in Ukraine

Having long established a reputation for being a reliable destination for outsourcing, Ukraine is now looking to take its IT industry to the next level and establish itself as one of the world's tech powerhouses. To accomplish this, in 2020, Ukraine's Ministry of Digital Transformation unveiled the [Diia City programme](#).

Diia City Is Special Economic Zone With Legal, Tax, and Employment Benefits for Local and Foreign Tech Companies

**Attraction of investments
in Ukrainian tech
ecosystem**

**Development of digital
infrastructure**

**Attraction of talented
workers from around the
world**

**Stimulation of the domestic
innovative products creation
(startups and product
companies)**

On 18 December 2021, the law "On Amendments to the Tax Code of Ukraine On Stimulating the Development of the Digital Economy in Ukraine" (the "Diia City Tax Law") was signed into law by the President of Ukraine. Therefore, as the regime is entered into force, Diia City remains in the spotlight for Ukraine's entire IT industry, including the entities engaged in AI & ML field.

Diia City: Parties Who Can Benefit from Diia City Residency

The Ministry of Digital Transformation is working to create a "state in a smartphone" called "Diia" that combines a mobile application and a public services portal.

The first step of the Ministry was the creation of diia.gov.ua, the online portal of public services, and the mobile application, where everything is fast, clear and easy to understand. They allow the citizens of Ukraine to get a service when and where they need it without worrying that it'll take all day in the queue and cost a lot of nerves.

Diia City: Tax Considerations

Labor Taxes

- 5%** Personal income tax
- 22%** Social Security fee (minimum wage as a basis for calculation)
- 1.5%** Military tax

Corporate Tax

- 9%** Exit capital tax
- OR
- 18%** Income tax

**Dividends at a 0% rate: to accelerate the company's growth through reinvestments, it has been proposed to exempt dividends from taxation and tax them at a 0% rate, provided that dividends are paid no more than once in two years.*

	Diia.City	India	Kazakhstan (Astana Hub)	USA (Delaware)	Georgia (IT virtual zone)	Poland
Income tax	-	€ 5 500	-	€ 2 175	-	-
Exit capital tax	€ 1 800	-	-	-	€ 1 000	-
PIT	€ 7 200	€ 7 200	€ 14 400	€ 4 976	€ 28 800	€ 7 200
Social security tax	€ 7 440	€ 5 760	€ 9 360	€ 22 032	€ 2 880	€ 30 925
Total taxes (€ per year)	€ 16 440	€ 18 460	€ 23 760	€ 29 183	€ 32 680	€ 38 125

Diia City: Expected Results

Diia.City is expected to be the best place where tech companies should be registered in Ukraine. Ultimately, the state-guaranteed most-favored-nation regime has to secure the following benefits:

- The cancelation of the “hidden employment contracts”, while maintaining the level of taxes provided by the “simplified system”, will allow product companies to build a transparent organizational structure and reliable, mutually beneficial conditions with employees. Investors will have a clear understanding of how many people work for the company, what their conditions are, etc.
- It will be easier to attract investments, which is now vital for any startup operating in Ukraine. The Law on Diia.City provides for the introduction of English law instruments, so investors will look with great confidence at projects in our country.
- The tax regime of Action City provides favorable conditions for investing profits in the development of the company. It will be possible to better implement the system of options and share transfers in startups.

As of the end of April 2022, 194 companies have become the residents of Diia.City

Ukrainian Startup Fund

The Ukrainian Startup Fund (USF) is a state fund launched on the initiative of Cabinet of Ministers of Ukraine. The mission of the fund is to promote the creation and development of technological startups in the early stages (pre-seed and seed), in order to increase their global competitiveness. The process of selecting startups for grants takes place on a competitive basis.

USF is expressly mandated to provide funding for early-stage startups. It has launched a pre-seed and seed-stage grant program, with awards of \$25,000 and \$50,000 for qualified businesses. USF plans to continue to grow this program as an important source of capital for early-stage businesses.

Kyiv

November 25, 2021

An offline conference connecting the Ukrainian AI community with world-renowned AI experts, organized by [AI HOUSE](#). The conference is designed for business owners and entrepreneurs, C-level executives and Heads of AI and ML, as well as specialists and engineers willing to unlock the power of AI for their companies and utilize the latest technology achievements.

The conference is aimed to connect global AI professionals with the Ukrainian AI community and meet fellow creative thinkers.

Organizers & Sponsors

Topics Under Discussion

Building a new generation of empathic products

AI 2041. Ten visions for our future

Machine Learning for science, health and sustainability

Data-driven innovation: Delivering AI/ML solutions from academia to enterprise

AI and the Metaverse

Big, tiny and Quantum ML

Transformers, implicit representations and future of multimodal learning

Self-supervised learning for video understanding

Why and how is AI fundamental for the upcoming revolution of multiverses

Kyiv

September 21, 2021

An event where experts talk about their experience in the successful application of artificial intelligence as well as about the results, goals, and forecasts for technology in the near future. The conference is intended for business owners, CFOs, CDOs, and CMOs.

The goal of the event is to encourage ideas exchange for rapid development and technological progress of Ukrainian business, in particular, to reduce the number of mistakes, optimize processes and expenditures, automate manufacturing and operating activity, and find new methods of business intelligence and marketing.

Topics Under Discussion

Why developing a data strategy shall be a top priority for companies

AI in the agricultural sector

Concept for the development of artificial intelligence in Ukraine: prospects and opportunities for Ukrainian business

Application of AI in process automation in retail: prospects, complexities and benefits

Industry 4.0. AI cases in industry

Modern supply chain management technologies. Foodex24 case

Marketing 2025 is impossible without chatbots

AI in cybersecurity – how it differs from robotization and how to implement it correctly

AI is the best financial assistant

Online

October 30, 2021

The conference which brings together experts immersed in AI, Data Science, Machine Learning, Big Data technology since 2014. The conference has 3 streams: Data Science & Machine Learning, AI for Business & Products, Data Engineering & MLOps.

AI Ukraine brings together more than 900 participants from all over the world to connect the expertise, share experience, and take another step forward the future of emerging technologies.

Organizers & Sponsors

Topics Under Discussion

Automatic Text summarization: is GPT3 the best and only?

Transfer learning for speech processing

AI for Inventory Management in 2 months: Tips and Tricks

Object detection, segmentation and pose estimation for mobile devices

Neural network in high-speed optical fiber communications

Anti-data-science: the Taleb's barbell in the AI world

Visual mapping and navigation

DPR – a new AI-disrupt

Predicting Unpredictable: How to bring value to the client who doesn't know what he wants?

AI- & ML-related Conferences in Ukraine

Amount of AI Conferences in Ukraine 2014-2021*

Due to the dynamics of the graph, it can be concluded that the amount of AI conferences in Ukraine has been growing steadily since 2014. This indicates the popularization of this topic in Ukraine and the increase of companies that use AI technology in their activities. Most conferences in recent years have been held online due to the COVID-19 pandemic.

The United Kingdom as a Potential Partner for Cooperation within AI/ML Industry

DEEP
KNOWLEDGE
ANALYTICS

Supporting AI Startups in the UK

Innovate UK

[Innovate UK](#) exists to help companies in any part of the UK to grow through innovation. Innovate UK is a key delivery body for the government's Innovation Strategy. They support business through a range of interventions, including helping them:

- to find the right partners
- to access the right expertise and equipment
- with financial loans and grants
- by connecting them with investors
- international funding

Innovate UK helps companies, through three strands of activity:

- inspire – to make the opportunity visible and compelling
- involve – to bring relevant organisations and people together
- invest – to convene the resources needed, including their own

Innovate UK runs competitions to identify the best ideas to support.

To date, Innovate UK has supported 11,365 UK businesses with one or more grants. Three quarters of these companies fall into the [technology sector](#), with SaaS and life sciences being most common.

In connection with the Russian invasion of Ukraine, UK Research and Innovation (UKRI) is conducting a comprehensive review of all current projects and related collaborations with Russian-based partners and institutions to ensure no research directly benefits the Russian government.

Supporting AI Startups in the UK

UKRI works in a partnership with a broad range of stakeholders to ensure maintain UK's leading position and realise the vast potential benefits of AI.

Transforming our world with AI UKRI's role in embracing the opportunity

AI Accelerator Programme

Scale Space, the UK's new community for scaling businesses, has joined forces with the University of Edinburgh to help unlock the innovation potential of startups working in the AI sector through a [Post-Covid AI Accelerator Programme](#). The programme was designed to accelerate the best AI startups in the UK/Scotland, Europe and beyond to scale globally within a short timeframe and aimed to attract disruptive scaleups that apply AI with high growth potential while helping them grow into world-leading companies.

Scale Space's partnership with the University of Edinburgh provided startup businesses on the Accelerator Programme with access to the wide range of expertise, mentoring and knowledge at Scale Space, to help them grow faster and stronger. The 20 companies selected each received a £7,500 grant from the Scottish Funding Council through the Data Driven Innovation (DDI) scheme. Also, accelerator participants benefited from specific and tailored advice as well as group working sessions and conferences to help their businesses grow during the 6-month programme.

[The University of Edinburgh AI Accelerator Programme 2022](#)

Machine Intelligence Garage

[Machine Intelligence Garage](#), the flagship artificial intelligence (AI) and machine learning (ML) acceleration programme from Digital Catapult, has supported more than 100 UK startups, contributing a total of £52 million of investment, since launching in late 2017.

Digital Catapult's flagship AI programme, Machine Intelligence Garage, is an acceleration programme that addresses the challenges today's artificial intelligence (AI) and machine learning (ML) startups face.

Building on this success, Digital Catapult recently recruited four new partners to provide the compute power and support for the next generation of Machine Intelligence Garage participants. Joining the programme's established partners including Amazon Web Services (AWS) and NVIDIA are:

- Cerebras Systems
- Earlham Institute
- Information Commissioner's Office (ICO)
- LightOn

Machine Intelligence Garage exists to support startups from across the UK, providing a range of benefits:

- accelerate market growth and positioning
- develop new products and services
- ethical support
- technical support and workshops
- investment and fundraising
- continued programme support

Executive Summary

DEEP
KNOWLEDGE
ANALYTICS

Key Takeaways 1/3

Software Development Industry Leads the Market

The **Software Development industry takes the biggest market share of 34%** (**81%** of companies develop **software**). Also, about **one-third** of companies work in such industries as **Social Media & Communication, Marketing & Advertising, and Big Data**. Geographically, more than half of Ukrainian AI companies are headquartered in Kyiv; **Kharkiv** takes second place (**11%**). Almost every second Ukrainian AI company can be described with the following words: it earns **\$1 to \$10 million** annually, has **11 to 50 employees**, and was founded **5 to 10 years ago**.

Partially Diminished Investment Potential

The US takes the lead in the number of investors in AI companies in Ukraine accounting for almost half of all investors. **Two-thirds** of companies have **seed** funding status whereas **VC firms and angel investors** make up **half of all investors** of Ukrainian AI companies. Investments in Ukrainian AI increased significantly over the last 7 years from **\$42 million in 2014 to \$441 million in 2021** with a **CAGR of 40%**. **Unfortunately**, due to the russian invasion of Ukraine **Q1 2022** brought only **\$1 million** and the **adjusted CAGR hit 24%**.

Due to the War, 41% of Ukrainian Startups Lack Money but 72% Will Try Continue to Operate

Since the war started, **71%** of startups **haven't relocated** abroad, **39%** claim that they **will run out of money shortly** and **28%** decided to **stop the operational activity**. Obviously, the dynamics of the startup market in Ukraine roughly reflects the situation with Ukrainian AI companies.

Key Takeaways 2/3

Ukraine Has Become the Significant Player in the AI Market in Eastern Europe

According to [Clutch Reviews 2022 of Top Artificial Intelligence Companies](#) Ukraine holds the leading position in the AI industry. Ukraine is among top 3 countries in Europe by the number of companies. Ukraine has the second-largest number of companies in the Eastern Europe (represented by 143 AI providers compared to 179 in Poland). The UK is taking the 1st place with 301 companies.

Ukraine Is Already Building the AI Tech Environment Inside the Country

Over the past decade, IT outsourcing has been the key engine driving the growth of Ukraine's tech sector. This has helped to produce remarkable annual rates of expansion over a sustained period, but now Ukraine is looking for options to create a positive tech environment to create products inside the country. The Ukrainian market already has the global-established names. For example, [Ring](#) (acquired by Amazon), [Grammarly](#) (among leaders in NLP with a valuation of one billion dollars), and [Reface](#) (hitting the top of app downloads was established and has an R&D office in Ukraine).

Ukrainian AI Professionals Are Gaining Greater Recognition From Global Tech Community

The AI industry players recognize the high-level talent of Ukrainian AI&ML engineers. They often hold leading positions in the world's top AI companies. Due to the active establishment of AI R&D centers in the country, Ukrainian specialists are able to exchange tech knowledge with colleagues from abroad (namely from the USA and Europe). In addition to relatively high knowledge of English, proactiveness, and ability to work in shifted business hours, Ukrainian AI engineers are constantly increasing their professional expertise.

Key Takeaways 3/3

Governmental Initiatives Contribute to Further Growth of AI & ML Sector in Ukraine

The government officials has developed the National AI Development Strategy which take into account the best practices of leading countries. However, in Ukraine it was decided to prioritise human capital development (e.g. how to use the government education system more efficiently for work force in AI) and focus on several areas of AI, where the country can achieve a leading global position. It seeks to reform the education system in order to provide the next generation of Ukrainian tech companies with the AI talent and qualified human capital necessary to drive the country forward.

Increasing Number of Educational Programs Help to “Nurture” Ukrainian AI Specialists

In contrast to outsourcing, which is historically developed at a very high level in Ukraine, Ukraine lacks the AI product companies. Through the creation and active development of R&D centers, thematic conferences, IT-hubs in the country, Ukrainian engineers gain the opportunity to work on an equal footing with colleagues from more developed markets. Ultimately, during the upcoming years the market will probably see the emergence of both new specialists and independent managers able to be involved in the full cycle creation of AI-based products.

AI & ML Are Actively Implemented Into Business Processes by the Domestic Companies

The market has witnessed the wide range of AI & ML application by Ukrainian companies in various industries, including real estate, agriculture, education, financial services and sales planning.
