

Longevity Governance Dashboards

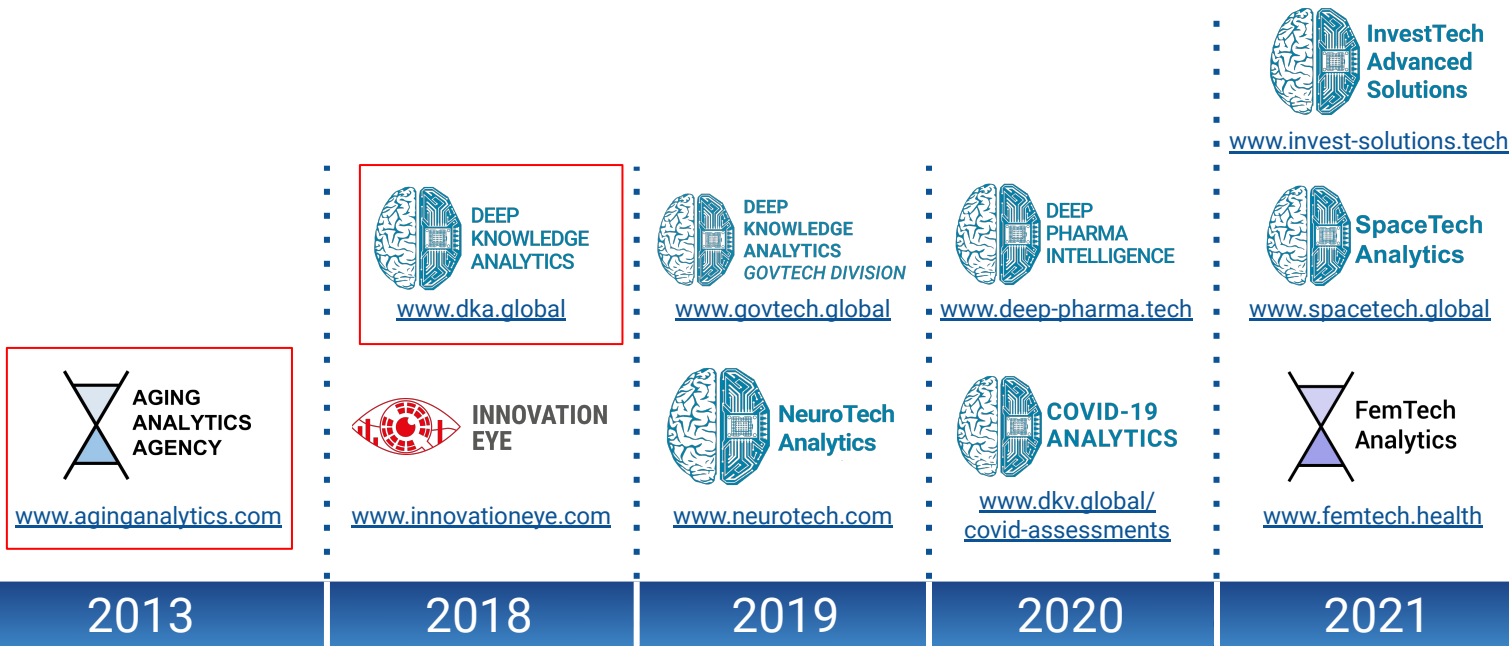

Deep Knowledge Analytics and
Aging Analytics Agency

Teaser

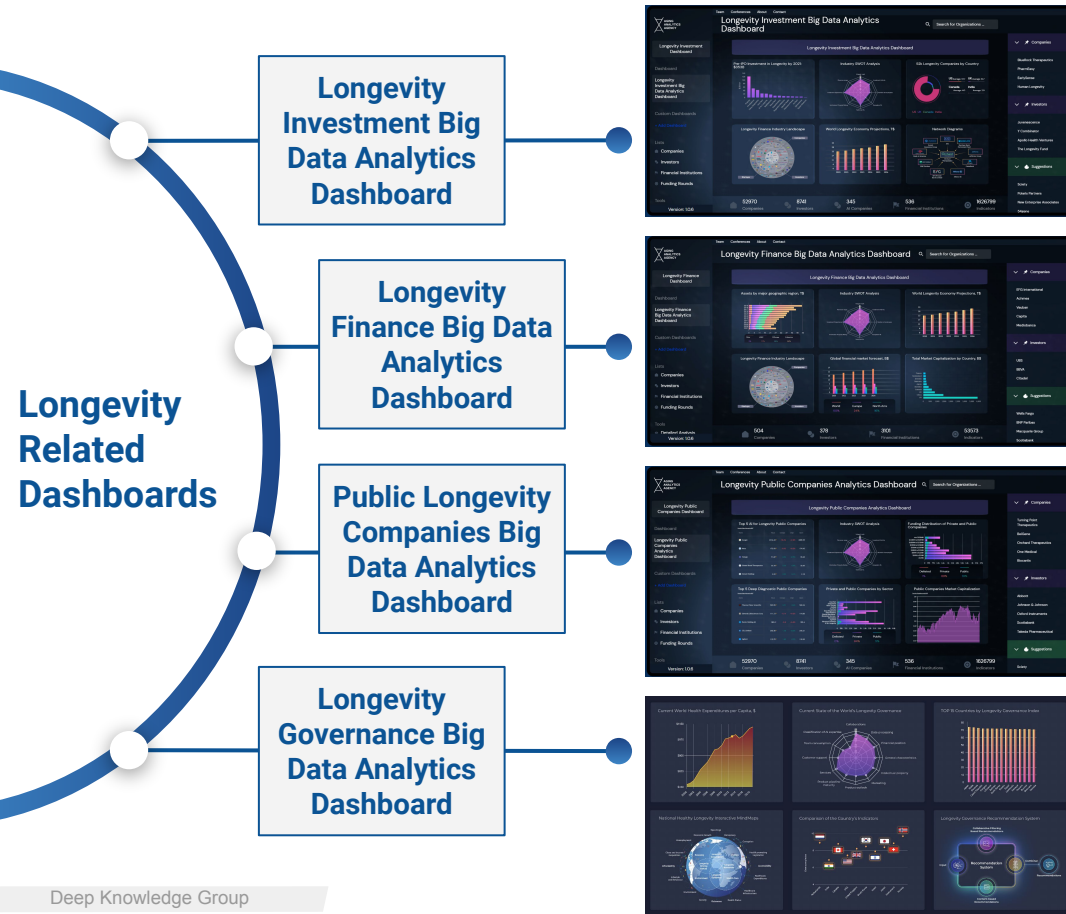

DeepTech-related Analytical Subsidiaries of Deep Knowledge Group

Deep Knowledge Group's analytical subsidiaries produce advanced analytics on DeepTech and frontier-technology industries using sophisticated frameworks and algorithmic methods that combine hundreds of specifically-weighted metrics and parameters to deliver insightful market intelligence, pragmatic forecasting and tangible benchmarking.

The extensive expertise in DeepTech sectors allowed us to create AI-Driven Big Data Analytics System and Dashboards

Pipeline of Longevity-focused Big Data Analytics Systems and Dashboards

Deep Knowledge Group has developed a set of analytical dashboards dedicated to various aspects of the Longevity Industry.

Big Data Analytics Systems and Dashboards aim to deliver the in-depth coverage of the broad and complex Longevity Industry and serve as the handful tools to resolve analytics-related goals.

Components of National Healthy Longevity Strategies

Longevity Governance Big Data Analytics System and Dashboard

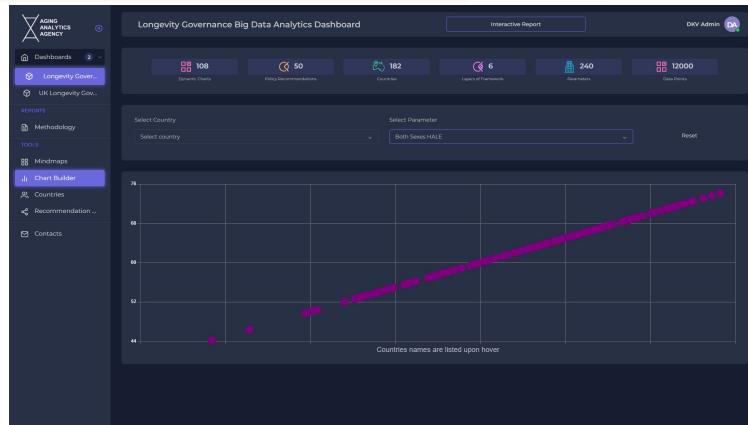

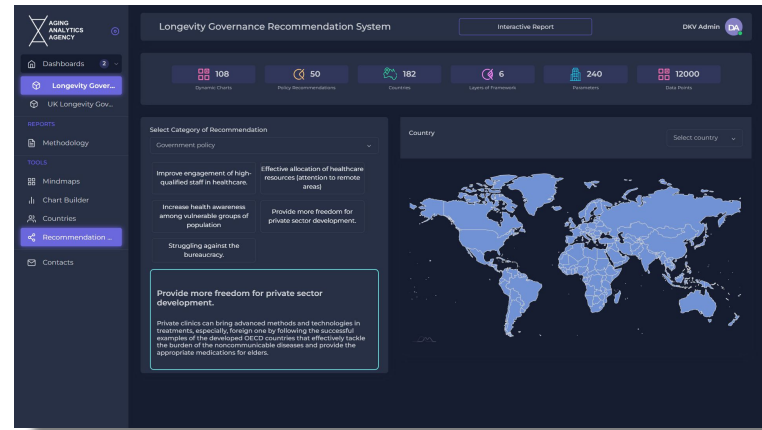

Longevity Governance Big Data Analytics System and Dashboard is designed to support, monitor, analyse, benchmark and forecast governmental decision making and population health optimization, and to compare best practices in Longevity Governance and the most progressive national healthcare systems.

The Dashboard reveals key insights on e-governance solutions and synergies with Longevity Industrialization, AI in Healthcare, Preventive Medicine and other tech-driven drivers and enablers of technocratic national healthcare policy modernization.

Key Parameters of Longevity Governance Big Data Analytics System and Dashboard

Focus Areas of Longevity Governance Big Data Analytics System and Dashboard

Longevity Governance Big Data Analytics System and Dashboard serves as end-to-end analytical solution designed to provide dynamic data about main indicators related to longevity across regions worldwide.

Longevity Governance in the UK Big Data Analytics System and Dashboard

The separate section of the Longevity Governance Big Data Analytics System and Dashboard is dedicated to the United Kingdom as the country being among global leaders in terms of the progress achieved in longevity governance.

Recommendation System for the UK

Data Relating to Longevity Governance in the UK

Longevity Governance Recommendations System

Longevity Governance Recommendations System provides actionable insights on the practical steps which can secure the improvements in national longevity policies for the defined countries.

Recommendations are delivered based on the following groups of parameters:

Comparison of Longevity Governance Regions

Regions Longevity Governance Comparison allows to conduct the comparative analysis of states based on the large number of indicators relating to the Longevity Governance. Some of such indicators involve the following:

- Life expectancy
- Human Development Index
- Global Gender Gap
- Prevalence of Undernourishment
- Prevalence of Mental disorders
- Current health expenditure (% of GDP)
- Normal Retirement Age

100+ parameters for comparison

Interactive Mindmaps

Interactive Mindmaps allow users to visualize the connections between the elements of the complex industries.

As an separate tool within the Longevity Governance Big Data Analytics System and Dashboard, interactive mindmaps represent the key differentiations between regions, allow to define the groups as per specific parameters.

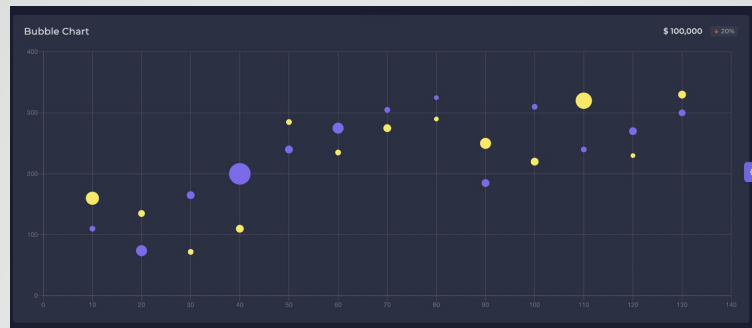

Interactive Chart Builder

Interactive Chart Builder allows to create the charts based on the user's desired parameters.

Relying on the extensive database, this tool is able to visualise the parameters of specific states relating to the longevity governance.

The key advantage of this tool lies in the fact that the data is aggregated from large number of external sources that makes the chart builder the handful tool for conducting analysis.

Future Plans for Analytical Dashboards Focused on Longevity Governance

SWOT Analysis of Longevity Policies across Countries

Dashboards will be able to assess the performance of every country in terms of Longevity governance and national healthcare optimization.

With AI-based algorithms and based on constantly updating database, such tool will assist in making the analysis.

Recommendations on Population Health Tax Credits

Recommendations will be generated to assess the efficiency of government-led initiatives to subsidise the public health.

They will also assist in implementation Health Tax Credits in new countries.

Assessments of Silver Economy across Countries

The tool is set to measure the potential of purchasing power of senior population across countries.

Such tool will generate insights on possible ways of optimization the spending power of silver generation.

Future Plans for Analytical Dashboards Focused on Longevity Governance

Estimates of Population Ageing

Larger volume of data aggregated by Dashboards over time will allow to make projections on the population ageing for every country.

Health and Longevity Indices

Health and Longevity Indices would help to better track the progress of national healthcare systems in extension the lifespan and achieving the healthy longevity

Enhancements of Recommendation System

It's planned that AI algorithms of Dashboards backing the Recommendation System will generate more precise insights over time

Planned Integrations of Longevity Governance Dashboards

DeepTech-Related Dashboards

Set of Big Data Analytical Dashboards dedicated to advanced industries such as GovTech, DeepTech, etc

AssistiveTech IT-Platform

IT-Platform tracking the overall development of AssistiveTech Industry

Longevity-Related Dashboards

Set of Big Data Analytical Dashboards on the Longevity Industry, Pharma, Longevity Finance, etc

Integrations of Longevity Governance Dashboards

AgeTech IT-Platform

IT-Platform delivers the analytical materials dedicated to the AgeTech Industry

Longevity Governance Index

Longevity Governance Index

Longevity Governance Index was constructed to measure the Longevity Governance development across 186 countries.

The index is a dynamic quantitative and qualitative benchmarking model constructed from 124 unique parameters that evaluate the current state of Longevity and related initiatives among analysed countries, find and determine strengths and weaknesses of the healthcare systems.

The future development of Index will involve:

- Extension the number of parameters;
- Constant validation of AI-backed models to achieve greater accuracy;
- Permanent updating the relevance of datasets.

Longevity Governance Index

Longevity Governance Index: Objective and Methodology

The Longevity Governance Index was constructed, considering the issues of **Demography, Ecology, Economy, Government Care, Health Status, and Society** across 186 countries. The index is a dynamic quantitative and qualitative benchmarking model constructed from 124 unique factors that measure the drivers of development within the Longevity Industry across both developing and developed countries.

Essentially, Longevity Governance Index concept envisages six dimensions:

- **Demography** – illustrates the changing dynamics of structure of the population.
- **Ecology** – assesses a country's exposure to the impacts of a changing climate, sociological, or biological hazards.
- **Economy** – measures resources available that can alleviate the impact of ageing.
- **Government Care** – measured by government activities and spendings regarding healthcare, as well as amount of laws, policies, and plans for Longevity initiatives.
- **Society** – evaluates development of human capital within the society.
- **Health Status** – determines the state of health of population with reference to life expectancy, well-being, and mental health indicators.
