The **Medical Clinics Industry in Switzerland** is a dynamic medical clinic sector, with the position as a global leader in healthcare innovation and excellence. Switzerland's robust healthcare system, combined with cutting-edge medical technologies and a strong focus on personalized patient care, makes it an ideal case study for the evolving medical clinics landscape.

This report explores the country's adoption of AI-driven healthcare solutions, telemedicine, and advanced diagnostics that are shaping the future of medical practices worldwide. Additionally, it highlights Switzerland's regulatory environment, which supports both traditional medical practices and the integration of new technologies to improve patient outcomes. By focusing on longevity and health optimization, Swiss medical clinics are pioneering models that blend preventive care with advanced treatment options. This comprehensive analysis provides crucial insights into the trends, challenges, and opportunities within the Swiss medical clinics sector, offering a forward-looking perspective for stakeholders across the global healthcare industry.

Medical Clinics Industry Outlook

Drivers of Growth

Population ageing

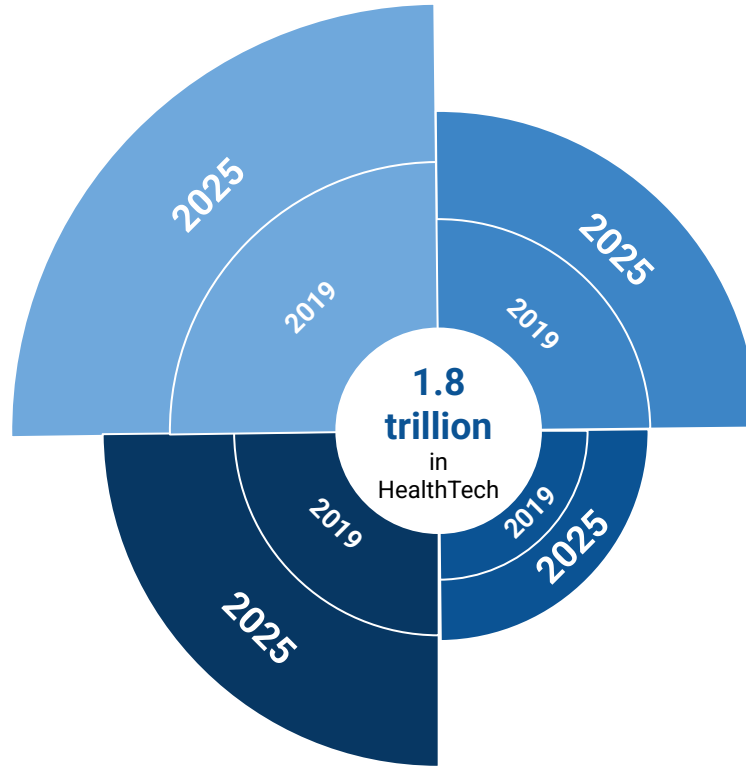

Medical services are in high demand as the world's population ages.

New machines and drugs

New remedies are being developed to meet previously unmet health requirements, stimulating additional technological advancements and pharmacological development.

Patient centricity

A shift to customised health care is underway, and platforms that deliver it to patients (literally) at their doorstep are in high demand.

Pharmaceuticals

\$ 871 → 1200

Medical devices

\$ 475 → 595

CROs*

\$ 37 → 55

Biotechnology

\$ 453 → 656

*Note: CRO is a company that provides support to the pharmaceutical, biotechnology, and medical device industries in the form of research services outsourced on a contract basis.

Advanced Technologies in Medical Clinics

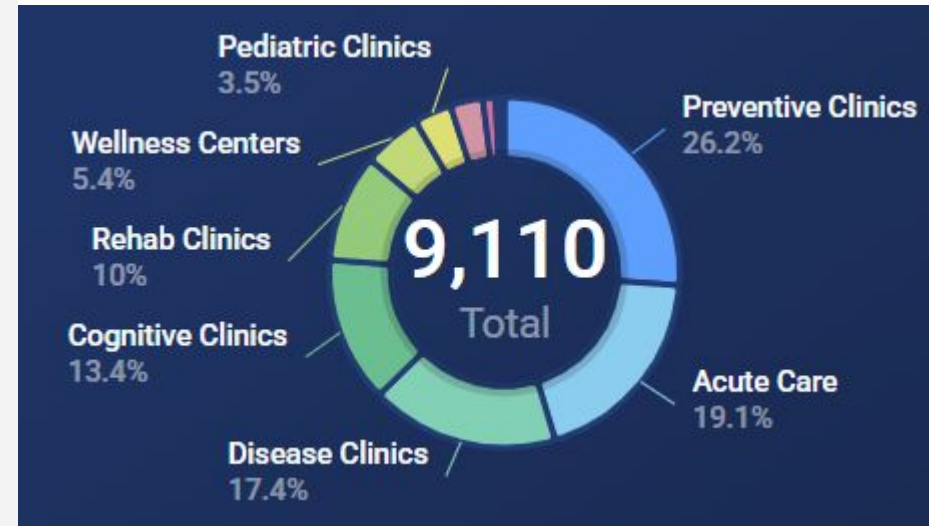

Robotic Surgery	Zurich University Hospital	The da Vinci system enables surgeons to perform minimally invasive operations. The robots are controlled by doctors to ensure maximum precision. This reduces the risk of complications and accelerates patient recovery.
Artificial Intelligence in Diagnosis	CHUV (Lausanne)	AI processes vast amounts of medical data with speed and accuracy. It helps detect diseases like cancer in early stages. This significantly improves the treatment outcomes for patients.
Cybermedicine	Hirslanden Clinic	Enables remote consultations between doctors and patients. Electronic prescriptions make the treatment process more convenient. This also minimizes the need for in-person visits for non-urgent cases.
Genetic Analysis	Basel University Hospital	Personalized treatment is developed based on the patient's DNA analysis. It helps predict the likelihood of specific diseases. Doctors use this information to choose the most effective therapy methods.
Smart Wearable Devices	Geneva University Hospital	These devices monitor health metrics such as heart rate 24/7. Data is transmitted in real time to doctors for analysis. This enhances patient safety, especially for those with chronic conditions.
Hybrid Operating Rooms	Bethanien Clinic	Operating rooms are equipped with modern tools combining traditional and robotic techniques. This allows complex surgeries to be performed with minimal invasiveness. Patients benefit from quicker recovery times thanks to these advancements.

Medical Clinics in Switzerland at a Glance

Medical Clinics in Switzerland presents a dynamic and multifaceted framework, reflecting innovation across various sectors, each contributing uniquely. Key segments include healthcare providers, advanced technological solutions, financial investment in medical research, pharmaceutical development and distribution, biotechnology breakthroughs, and pioneering medical technologies. Additionally, consultancy and management firms play a crucial role in streamlining operations and strategic planning. Specialized fields, such as **precision medicine, women's health (FemTech), chronic disease management, and insurance models**, thrive within this ecosystem. This overview of Medical Clinics in Switzerland highlights its diverse, forward-thinking nature and its significance on a global scale.

In the Medical Clinics sector, clinics primarily focus on **Preventive Clinics** (26.2%), **Acute Care** (19.1%), **Disease Clinics** (17.4%), and **Cognitive Clinics** (13.4%), while **Rehabs** (10%) and **Wellness Centers** (5.4%) play significant roles. **Pediatric Clinics** account for 3.5%. This varied distribution reflects the depth and focus of the Medical Clinics ecosystem, which could be effectively represented in a pie chart.

Distribution of Medical Clinics by Category

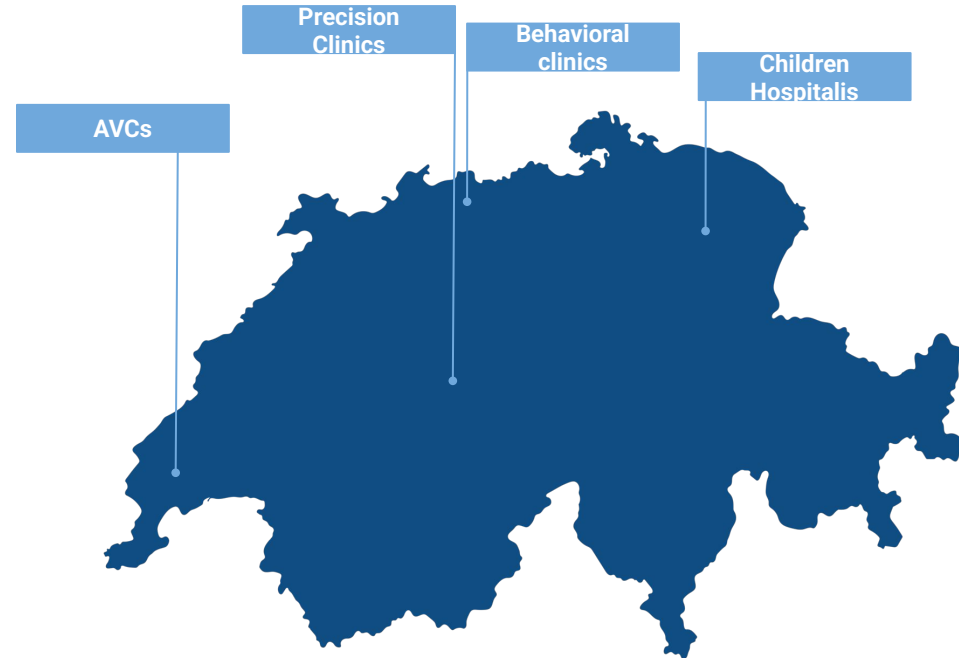

Medical Clinics in Switzerland at a Glance: Clinics

Switzerland serves as a prominent hub for HealthTech innovation, hosting a significant number of companies within the sector.

The Swiss government actively fosters innovation by introducing and supporting advanced HealthTech initiatives. For instance, biotech and science parks, such as the Biopôle in Lausanne, provide a collaborative environment that drives growth in healthcare, biotechnology, and pharmaceuticals, with local production of advanced solutions. Building a resilient and cutting-edge healthcare industry remains a top priority for Switzerland. A strong focus on research and development (R&D) has become a key strategy in achieving these goals. Switzerland attracts numerous pioneering companies in medicine and healthcare to its thriving innovation districts, offering ecosystems specifically tailored to medical advancement. With the ongoing growth of global medical care initiatives in the region, Switzerland continues to solidify its position as a leading global center for science-driven startups and healthcare innovation.

The Federal Council's Health Policy Strategy 2020–2030

The Federal Council's health policy strategy for 2020–2030, known as Health 2030, addresses Switzerland's healthcare challenges, including rising costs, aging populations, and technological advancements. It focuses on four pillars: embracing digital transformation, adapting to demographic and societal changes, fostering opportunities for healthier lifestyles, and maintaining high-quality, affordable care. The strategy emphasizes sustainable healthcare and equal access for all residents. It aims to leverage innovation and collaboration while addressing ethical and legal considerations surrounding new technologies. Overall, Health 2030 strives to build a modern, inclusive, and efficient healthcare system for the future.

Six challenges will be targeted:

- technological and digital transformation
- demographic and social changes
- maintenance of high-quality, affordable care
- opportunities for a healthy life (environment/workplace)

Strategic Objectives

Utilize Health Data and Technologies

Promote digitalization and define the use of new technologies.

Promote Health Literacy

Enhance awareness and improve access to health information.

Safeguard Care and Funding

Ensure adequate long-term care and optimize its funding.

Ensure Healthy Aging

Focus on preventing diseases and supporting child health.

Improve Quality of Care

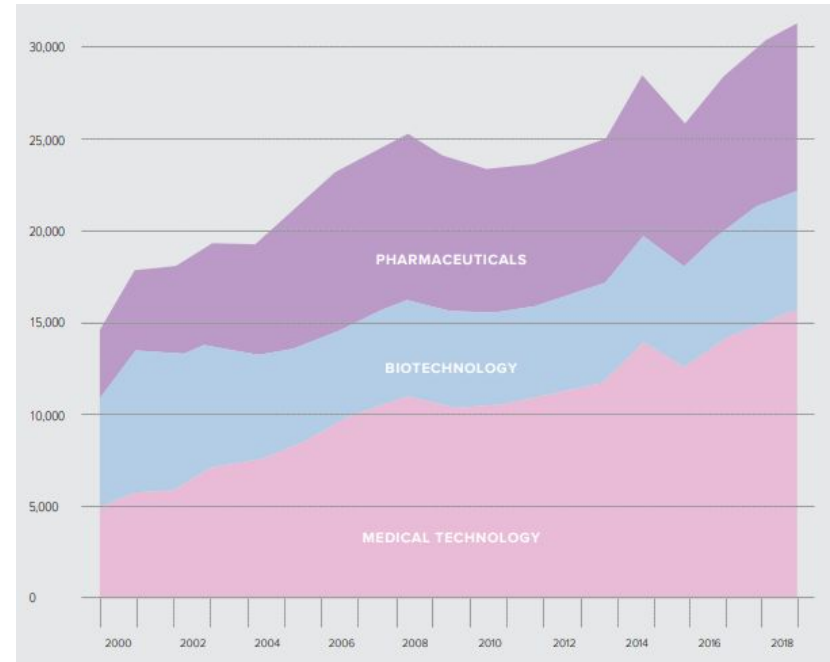

Strengthen coordinated care and enhance medical treatments.

Increased International Collaboration in the Switzerland Patents in Life Sciences

In recent years, Switzerland has demonstrated remarkable growth in international collaboration for Medical Clinics-related patents, underscoring its dedication to establishing itself as a global leader in innovation. This increase in patent registrations highlights Switzerland's expanding network of global partnerships and its commitment to addressing complex challenges within the Medical Clinics sector.

While fluctuations in the annual number of newly registered patents are anticipated, the average number of patents over the past four years has significantly surpassed prior levels. This trend reflects Switzerland's consistent progress in nurturing a robust intellectual property landscape. Looking ahead, Switzerland's sustained emphasis on enhancing global collaborations and achieving high levels of annual patent registrations points to a promising trajectory for innovation. The country's active engagement in the Medical Clinics domain will pave the way for transformative discoveries and foster cross-border partnerships, reinforcing its status as a dynamic hub for progress.

Longevity Clinics in Basel

The **Memory Clinic FELIX PLATTER** is amongst the largest Swiss centres for diagnosis of cognitive disorders, in particular for the early diagnosis of dementia.

Address

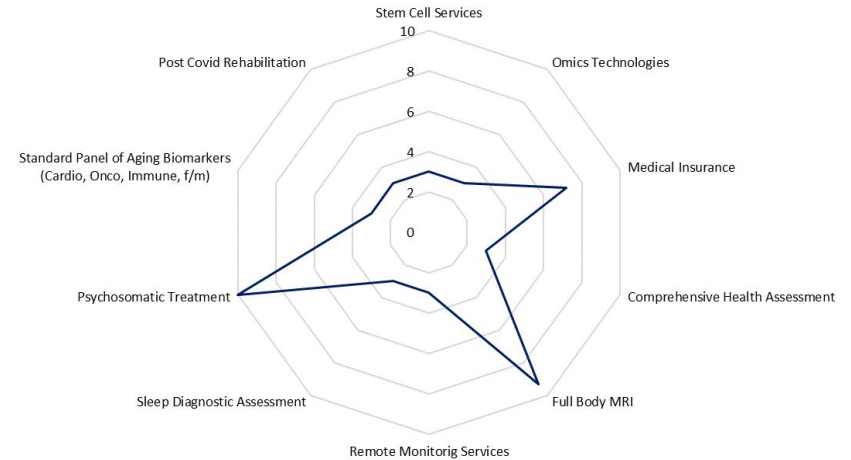

Burgfelderstrasse 101, Postfach, 4002 Basel,
Switzerland
Tel. +41 61 326 47 60

Pricing

Comprehensive Health Assessment - varies

Advantages

- The Memory Clinic Basel was one of the first in continental Europe in 1986. The Memory Clinic Basel is a full member of the Swiss Memory Clinics association
- Studies of adults' brain disorders
- BrainCheck, BrainCoach
- Psychosocial support to patients and relatives

Research projects at Memory Clinic

Research projects	Description
Drug research (Study of Gantenerumab, CREAD study, EMERGE study, GENERATION study 1, GENERATION study 2, TOMMORROW study)	With the aim of preventing or delaying the progression of symptoms of Alzheimer's disease, different substances were investigated in parallel.
BAMBI study	Neuropathological studies have shown that Alzheimer's disease begins in brain structures other than those involved in memory. As part of the AMBIZIONE study, the Memory Clinic Basel has developed new tests to measure the functions of precisely these structures that were first affected.
AMBIZIONE study	The AMBIZIONE study is dedicated to the question of whether Alzheimer's disease can be detected earlier with the functional and structural dimensions of the transentorhinal cortex.
BASEL project (Basel Study on the ELderly)	The goals of the BASEL project are therefore: <ul style="list-style-type: none">• diagnosing dementia, in particular Alzheimer's disease, at a stage in which no one has noticed any change in everyday life;• exploring the conditions of "successful aging".
EAGLE project	Early Alzheimer's disease and genetics: a longitudinal evaluation.

Medical Services

The Preventing And Delaying Brain Disorders

Memory Clinic offers an interdisciplinary, outpatient evaluation of adults' brain disorders. The focus is on dementia diagnostics. The clarifications aim to diagnose brain disorders as early as possible.

Patient Can Expect:

- Your family doctor must register you with Memory Clinic for clarification. The clarification takes place in several steps and on four dates: neuropsychological examination, medical examination, imaging, interpretation of diagnostic results.
- The neuropsychological examination is a central aspect in the diagnosis of dementia and brain disorders.
- At the Memory Clinic Basel we are always looking for healthy people who want to take part in a study. That is why we have started to create a register for healthy people interested in research. It collects the contact details of people who, in principle, want to take part in a study. As soon as a new study is started, we can use this register to search for people who would be suitable for the study.

The **Schmerzlinik Basel** is the leading centre of excellence for interventional pain diagnosis and therapy in Switzerland. Also the most important medical specialties include anesthesiology/anesthesia, neurology, orthopedic surgery and traumatology of the musculoskeletal system, psychology, rheumatology and synovial diseases.

Address

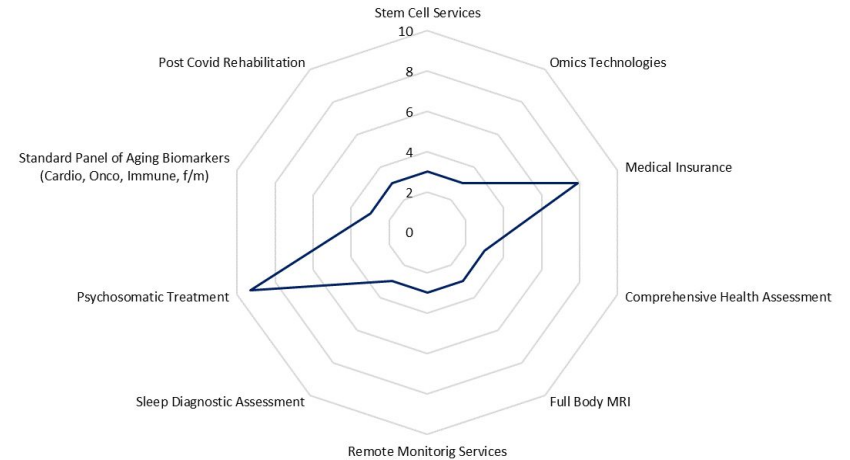

Hirschgässlein 11, 4010 Basel, Switzerland
Tel. +41 61 295 89 89

Pricing

Comprehensive Health Assessment - varies

Advantages

- Certified quality
- Putting people first
- All-round safety
- Openness and sustainability
- Responsibility and expertise

Areas of specialisation at Schmerzlinik Basel

Area	Description
Anaesthesiology	Medical speciality that allows the patient to benefit from a surgical procedure or an invasive medical treatment safely and painlessly. Two techniques used: general anaesthesia, local/regional anaesthesia (medullary anaesthesia, peripheral block).
Interventional pain therapy	The Schmerzlinik Basel has an intermediate care unit with 12 intensive care beds for the administration and supervision of treatments for outpatients. Specialist nursing staff from the anaesthesia and intensive care medicine departments administer the necessary infusions on medical instruction and monitor vital signs.
Orthopaedics and traumatology	Mainly surgical disciplines concerned with degenerative and trauma-related diseases of the musculoskeletal system and spine, i.e. all the bones, joints, ligaments, tendons and muscles that are responsible for movement.
Radiology	High-quality services and skills in the most specialised imaging fields: neuroradiology, ENT radiology, female imaging, and thoracoabdominal, urologic, osteoarticular, vascular and interventional radiology.
Rheumatology	Rheumatology is concerned with diseases of the joints, bones and soft tissues, so impairment of the functional capacity of the locomotor apparatus as a result of pain or stiffness.
Synovial diseases	Synovium takes on important filter functions and tasks of the immune system. Synovial disorders can lead to severe pain, joint swelling, or joint effusion. Most of the time, these diseases are chronic.

Health Assessment Plan

Focus treatments

- psychiatric disorders
- rheumatic complaints
- headaches
- back pain
- arthrosis
- fibromyalgia
- psychiatric disorders

Patient Can Expect:

- Opening hours: Monday to Thursday from 8 am to 5.30 pm, Friday from 8 am to 5 pm.
- Apart from outpatient treatment, the clinic also has an inpatient department with comfortable single- and multiple-bed rooms.
- The Schmerzlinik Basel offers the possibility of video consultations.
- Clinic's staff are highly qualified and keep their subject knowledge up to date with regular continuous professional development.
- The Schmerzlinik Basel is open to patients with all types of insurance (private, semi-private and basic). Treatment and services are charged directly to the patient's health insurance company (applies only to insurance in Switzerland).

The **University Geriatric Medicine FELIX PLATTER** combines the specialised areas of acute geriatric medicine, geriatric psychiatry and rehabilitation at one of the most innovative buildings of this kind.

Address

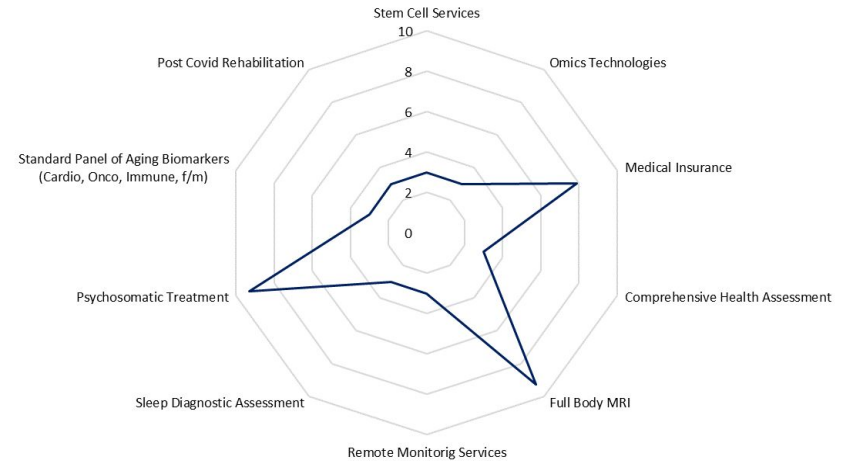

Burgfelderstrasse 101, Postfach, 4002 Basel,
Switzerland
Tel. +41 61 326 41 41

Pricing

Comprehensive Health Assessment - varies

Advantages

- FELIX PLATTER stands for high quality
- The focus is on people
- FELIX PLATTER's cooperation is open and constructive
- Sustainability as obligation
- Dedicated, innovative and qualified employees as success factors

Procedures at Universitäre Altersmedizin Felix Platter

Diagnosics	Description
Imaging examinations	Computed tomography, DEXA: if bone loss is suspected, conventional X-ray, ultrasound, neurovascular ultrasound: discover constrictions in the brain.
Occupational therapy	The occupational therapy measures are closely based on everyday life, train motor skills, sensory skills, cognition and thereby support optimal rehabilitation.
Nutritional therapy: eat age-appropriately	FELIX PLATTER use the results of nutrition-related research in geriatric medicine and create high-protein menus in age-appropriate quantities, with the same nutrient content.
Speech therapy	The symptoms that occur frequently in old age can also include speech, speech and swallowing disorders (aphasia, dysarthria and dysphagia). Speech therapists diagnose and treat patients in individual and group therapies.
Physiotherapy	Physiotherapy at FELIX PLATTER includes all currently known and scientifically recognized forms of therapy. Physiotherapists are specifically trained and specialized in the treatment of long-term disease and age-specific complaints.
Psychological service	In the case of various brain diseases, neuropsychologists clarify to what extent the patient's cognitive functions are impaired. These examinations form the basis for the following offers and measures.
Social counseling	The social counseling in the university geriatric medicine FELIX PLATTER supports you in clarifying some questions in close cooperation with the entire treatment team.

Medical Services

Total Baseline Price - varies

- Acute geriatric medicine: quick and competent help
- Age psychiatry: somatic-psychiatric double care for Alzheimer's disease, dementia
- Rehabilitation (geriatric rehabilitation, neurological rehabilitation, musculoskeletal rehabilitation, Internal-oncological rehabilitation)

Patient Can Expect:

- Registration for inpatient stay: regulated by specialists. For outpatient treatment your referring specialist (e.g. your doctor) will register you with us.
- As part of your treatment, FELIX PLATTER collects and stores your personal and health-related data. These data are treated with absolute confidentiality.
- FELIX PLATTER contributes to the maintenance of the physical and mental health of elderly people, alleviates the consequences of the aging process and informs the public in a simple and understandable way about the latest scientific findings in geriatric medicine.
- The Basel Mobility Center FELIX PLATTER has the prerequisites to identify the finest irregularities when walking at an early stage.

RCLIN is a day clinic that offers exclusive molecular diagnostics and personalised treatments that stem from the world-renowned Swiss scientific and clinical work supported by the leading laboratory and research centers in the USA and the EU.

Address

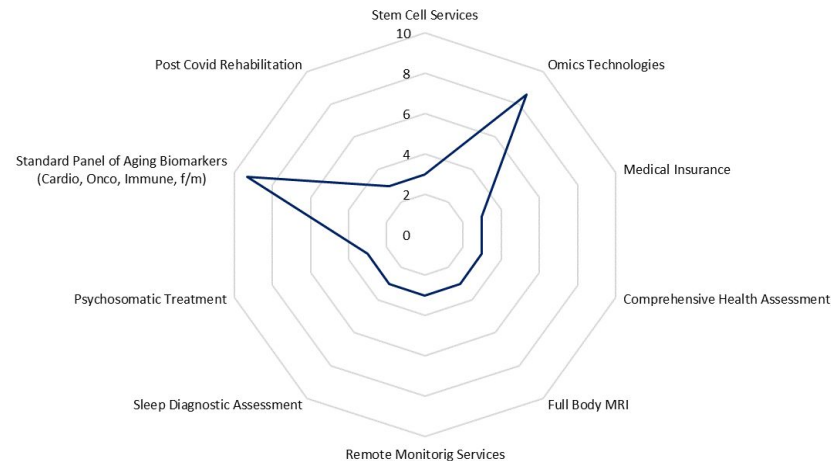

Rue du Lac 10, 1815 Clarens, Switzerland
Tel. +41 (0) 21 963 25 00

Pricing

Comprehensive Health Assessment - varies

Advantages

- The Center is operated by the Pruss family and run by a team of medical professionals
- Molecular medicine
- Personalized treatments
- Focusing on identifying, preventing and treating the causes and not the symptoms of a disease

Procedures at RCLIN Switzerland

Diagnosics	Description
Adults 60+	RCLIN's Adults 60+ program is designed to support the proper functioning of the major health systems and prevention of aging diseases, such as: cardiovascular, cancer, chronic inflammation, gastrointestinal functions, and good sleep. The treatment lasts minimum 12 months.
Genetic Sports Profile	This program helps patients to discover a set of sports types and exercise loads that will be the most effective in supporting good health, achieving ultimate performance and good looks of the body. Depending on a patient's molecular reactions during and after exercising, we will develop a personalized nutritional plan that will support the sports activities recommended for the patient.
Life Extension	RCLIN's Life Extension personalized program targets premature aging and supports factors that reinforce the body's longevity mechanism. It starts with determination of biological age and identification of the main triggers that launch premature aging. This is a 12-month program.
Molecular Balance	The most comprehensive health program offered at our clinic is the multidisciplinary Molecular Balance, which consists of Four Phases including the most comprehensive set of molecular and genetic laboratory diagnostics available at RCLIN. It normally lasts between 6 and 12 months, but it can be shorter or longer, depending on each patient's case.
Others	Acne, Allergies, Cardio support, Liver detox, Energy boost, Healthy sleep, Intolerances

Lab Packages

Prices depends on complexity expertise, diagnostics

General clinical lab tests; identification of correlations between various factors that can cause aging; explanation of identified health risks and contributions to the identification of the most effective and complementary treatments.

Patient Can Expect:

- The services provided by the RCLIN Center are limited to molecular health programs and diagnostics. The Center does not offer general medical services and takes patients by appointment only.
- Patients are advised to check first with their health insurances providers, if any fees and costs for personalised programs will be reimbursed.
- RCLIN's strength lies in using the exclusive and most advanced laboratory diagnostic tests, a highly qualified international team of experts, excellent facilities and the production of personalised medications based on patient-unique formulas.

The **Swiss Concussion Center (SCC)** is one of the leading institutes for interdisciplinary diagnosis and therapy of concussion in elite athletes.

Address

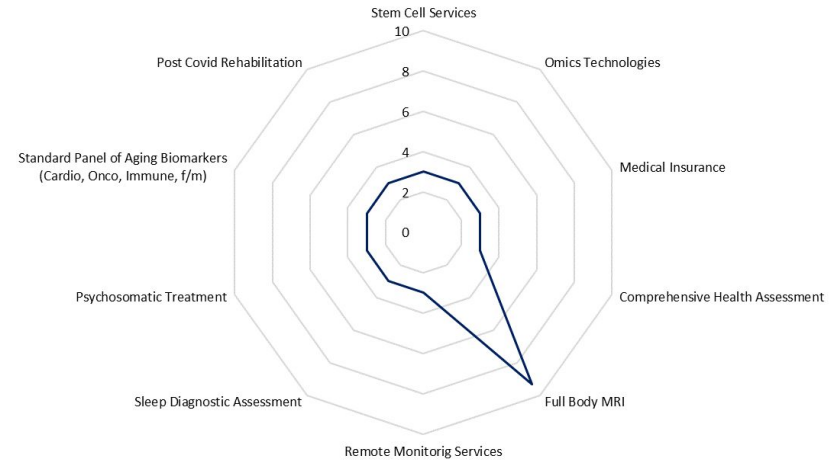

Schulthess Klinik, Lengghalde 2, CH-8008 Zurich, Switzerland
Tel. +41 44 385 72 00

Pricing

Comprehensive Health Assessment - varies

Advantages

- Evidence-based medical diagnostics and treatment
- Broad range of specialists - quality assurance
- Advanced technologies for examinations and therapies
- Tailored to the requirements of elite athletes

Procedures at Swiss Concussion Center

Diagnostics	Description
Anamnesis and clinical neurological examination, as well as examination of the cervical spine	When dealing with head injuries, detailed assessment of the symptoms (anamnesis) and their interpretation is very important during the early stages after the event.
Vestibular and oculomotor examination	Video head impulse test, dynamic visual acuity (DVA), sacculus test, utriculus test, video-oculography with caloric measurement, fundus photography, pure tone audiometry.
Neuropsychological examination	The neuropsychological examination allows identifying cognitive impairment, such as disturbances of memory, attention, concentration or reaction time.
SCC physio check	Short anamnesis, vestibulo-oculomotor evaluation, checks on postural stability, gait analysis, specific examination of the cervical spine and various functional tests.
Dynamic posturography (equitest)	Dynamic posturography (equitest) is a dynamic balance analysis. After head trauma, this allows differentiation between the components involved in the balance system.
Visuo-vestibular integration test (2D-Turntable)	This test objectively quantifies how information on self-motion in space is integrated by the brain. The aim is to find out whether disorientation, dizziness and nausea after a concussion are caused by an imbalance in the processing of information on self-motion from the visual system and/or the vestibular system.

Therapy

Total Baseline Price - varies

Physical therapy, vestibular rehabilitation, optokinetic and oculomotor training, specific balance training, cervical manual therapy, sport-specific training, dynamic posturography (equitest), swivel chair, pain management, visuo-vestibular desensitization (2D desensitization)

Patient Can Expect:

- There is a risk of head injuries in many sports - regardless of whether they are amateur or professional. Depending on your symptoms, Swiss Concussion Center carries out a tailor-made assessment of your position and advise you on how to return to routine training and competitive sport as early and safely as possible.
- Center guarantees an immediate assessment after a concussion with timely referral. Close cooperation with the medical team of the affected athlete is a high priority in order to ensure a safe and quick resumption of routine training and competitive sport.
- A quick clarification and treatment of all forms of head injuries and the related symptoms is Swiss Concussion Center's priority.

LIFE SCIENCES DIVISION

Additional Longevity Services in Basel, Geneva and Zurich

Concept of Additional Longevity Services

Concept of Additional Longevity Services

Additional Longevity services are Longevity services that are recommended for Longevity Check-Up in addition to advanced procedures and tests. They can reveal a bigger picture about the patient's health and show problems in more specific areas of human well-being.

Places that offer Additional Longevity Services

Additional longevity services can be found not only in longevity clinics but also in hospitals of general medicine, specialised clinics, diagnostic centres and laboratories. Patients benefit from completing additional procedures and tests in specialised clinics as they can receive a more specific and broad assessment on needed services.

Biobanks

Further, patients can donor and store or receive biological material (DNA, cells, tissue, etc.) in particular Biobanks or Clinical and hospital-based biobanking. Biobanks play an increasingly important role in healthcare research and delivery as health systems become more patient-centered, and medicine becomes more personalised.

Cell and bio materials storage

Biopsy for fibroblasts and their storage	Baby teeth	Umbilical cord blood	Sperm and eggs	Mesenchymal cells	Embryos	Cryobanks
--	------------	----------------------	----------------	-------------------	---------	-----------

List of Additional Longevity Services

Breast Ultrasound + Mammography

Kidney Function Test

Liver Function Test

Tumors Marker (PSA, CEA, AFP)

Mesotherapy or PRP

Cervical Cancer Screening (Gynecologist)

Comprehensive Geriatric Treatment

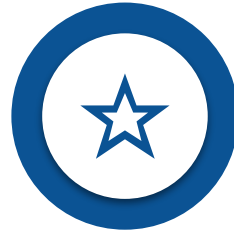

Hair Transplants/Consultation

Levels of Additional Longevity Services*

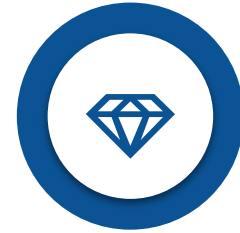

BASIC

Basic entry-level is recommended in order to take advantage of the most basic services.

ADVANCED

Advanced level is a more comprehensive package with an expanded range of services at a higher price.

PREMIUM

Premium level, comprising of the same services as Advanced, in addition, offers extra class services. It is the best possible care.

Cell Technology Table

Cell Technology Table represents the importance and utility of **biomaterial analysis** used for **in-depth health assessment**.

Biomaterial	Sources	Purpose / Application
Hematopoietic stem cells	Umbilical cord blood / bone marrow	Restoration of the hematopoietic system (bone marrow implantation)
Multipotent mesenchymal stem cells	Adipose tissue / Tooth pulp / Bone marrow / Amniotic fluid / Varton's jelly	Treatment of disorders such as spinal cord injury, bone fracture, autoimmune diseases
T Cells	Isolation of untouched human T cells from peripheral blood mononuclear cells (PBMC) by depleting B cells, NK cells, monocytes, platelets, dendritic cells, granulocytes and erythrocytes	CAR-T therapy
Neural crest derived stem cells	Bulbar region of the hair follicle	Experimental Cell Therapy for Central Nervous System Injuries
Introduced pluripotent stem cells	Reprogramming of somatic cells (peripheral blood cells or dermal fibroblasts)	Experimental stem cell therapy for intractable diseases
Human amnion epithelial cells	Amnion	Metabolic Liver Disease
